Chhattisgarh Government

Preface

The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent and compulsory recording of the vital events and characteristics thereof, as per legal requirements. In Chhattisgarh, the Civil Registration System covers registration of births and deaths only. It provides the best source of information on the vital rates at district levels.

This issue of '**Annual Report on the working of the Registration of Births and Deaths act, 1969 for the year 2014**' based on Civil Registration System Chhattisgarh provides an overview of the functioning of the Civil Registration System (CRS) in the State and presents a compilation of data on registered births, deaths and infant deaths with rural-urban & sex-wise break-up and sex ratio at birth based on Civil Registration Records. An attempt has been made to present more detailed analysis as compared to previous reports.

The publication is divided into two parts. Part I provide a brief review of the Civil Registration System and contains a summary analysis of data on registered births, deaths, infant deaths and sex ratio at birth at State level. Part II incorporates the main tables which provide District wise data on registered births, deaths and infant deaths with rural-urban & sex-wise break-up and sex ratio at birth.

The data sources for the report are the Form No. - 1, 2, 3 and summary report - 11, 12, 13 provided by the Registrars of Births & Deaths. I take this opportunity to express my sincere gratitude to all Registrars and sub registrars of Births & Deaths for their kind cooperation in providing the required information.

The report has been prepared in the Vital Statistics section of this office. I would like to place on record my appreciation for the efforts put in by Ms. Alpita Kapadia and the team. It is hoped that the results given in this report will be useful to all the stakeholders.

Suggestions for further improvement of the report will be highly appreciated.

(Amitabha Panda)

Definitions used in this Report

Birth: Live birth or still birth.

Live birth: Complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, and each product of such birth is considered live-born.

$$\text{Crude Birth Rate} = \frac{\text{Number of live births during the year}}{\text{Mid-year population}} * 1000$$

Still Birth: Foetal death where a product of conception has attained at least the prescribed period of gestation.

$$\text{Still birth rate} = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} * 1000$$

Death: Permanent disappearance of all evidence of the life at any time after live birth has taken place.

$$\text{Crude Death Rate (CBR)} = \frac{\text{Number of deaths during the year}}{\text{Mid-year population}} * 1000$$

Infant Death: Death of a child less than one year old.

$$\text{Infant Mortality Rate (IMR)} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} * 1000$$

Maternal Mortality Ratio (MMR): It is the number of maternal deaths per 1000 live births and still births.

$$\text{Maternal Mortality Ratio} = \frac{\text{Number of Maternal Deaths during the year}}{\text{Number of live births and still births during the year}} * 1000$$

Level of Registration: The level of registration, defined as the percentage of registered births/deaths to the births/deaths estimated through SRS, determines the performance level of a State/Union territory with regard functioning of Civil Registration System.

$$\text{Level of Registration or LOR (\%)} = \frac{\text{Number of events during the year}}{\text{Number of estimated events for the year}} * 100$$

Mid-year Population: Population at the mid-point of the year, i.e., 30th June/1st July of the year.

Number of estimated events for a year = Mid-year population x SRS Rate

Sex ratio: It is the ratio of females to males in a population measured per thousand males.

$$\text{Sex Ratio} = \frac{\text{Number of females}}{\text{Number of males}} * 1000$$

$$\text{Sex Ratio at birth} = \frac{\text{Number of female birth}}{\text{Number of male birth}} * 1000$$

$$\text{Sex Ratio at death} = \frac{\text{Number of female death}}{\text{Number of male death}} * 1000$$

Civil Registration System Figures: at a glance

Demographic features of Chhattisgarh as per the Civil Registration System (CRS):year 2014	
Registration of Births	
1). Estimated Midyear Population	27468559
2). Estimated Births	627271
3). Total Number of Births Registered	845337
4). Level of Registration (%)	132.65
5). Crude Birth Rate (SRS)	23.2
Registration of Deaths	
1) Estimated Deaths	200520
2). Total Number of Deaths Registered	172805
3). Level of Registration (%)	86.18
4). Crude Death Rate (SRS)	7.3
Registration of Infant Deaths	
1). Total Number of Infant Deaths Registered	10922
2). Infant Mortality Rate (SRS)	12.9
3). Percentage of infant death to total deaths	6.3
Sex Ratio at birth (Net Registration)	
1). Total number of male births of the year 2014 registered in 2014	292864
2). Total number of female births of the year 2014 registered in 2014	268077
3). Sex Ratio at birth	915

Findings:

- Level of birth registration is 132.65 per cent and level of death registration is 86.2 per cent during the year 2014 in Chhattisgarh.
- The number of births registered increased to 44.8% in the year 2014 in comparison of 2013. (Births registration increased to 8.45 lakh in 2014 from 5.36 Lakh in 2013).
- Out of 27 districts of Chhattisgarh, 24 districts reported the level of registration of births above 90 per cent in 2014.
- And rest of the three districts reported the level of registration of the births around 80 per cent.
- The sex ratio of registered live birth based on gross total registration is 934 in 2014.
- The sex ratio of registered live births based on net registration (both birth and registration in 2014) is 915.

1. Civil Registration System (CRS) in Chhattisgarh

Introduction:

The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent and compulsory recording of the vital events and characteristics thereof, as provided through the legal requirements of the State. It is compulsory to report births and deaths to the Registrar of Births and Deaths under the Registration of Births and Deaths Act, 1969. Registration of births and deaths is in the interest of the individual and the nation and an important source for demographic data for socio-economic development and population control in developing countries. In India, the need for dependable demographic data was felt soon after independence heralding the era of Five Year planning.

In India the registration of vital events and the administrative machinery for this purpose has been in existence for more than a century. It had been working under diversified Acts and executive instructions thus making it unsuitable for the independent India.

In the beginning, the registration of births and deaths started on voluntary basis and there was no uniformity in statistical returns resulting in both under registration and incomplete coverage. In order to unify the civil registration activities, the Civil Registration System (CRS) was introduced in India under the Registration of Births and Deaths Act (RBD Act), 1969. Civil Registration System may be defined as a continuous recording of vital events such as births, deaths and marriages occurring in a population. The basic uses of data from Civil Registration System are

- Maintenance of permanent records on births and deaths as legal documents.
- Assessment of continuous changes in population.
- Evaluation of success of socio-economic programs by indicators based on vital events and size of population.

As a matter of fact, requirement of this system as legal proof of births and deaths should in itself be strong enough reason for any country to have a fully operational CRS.

Registration of Births and Deaths Act 1969

This Act replaced the then existing laws and unified the system of registration throughout the country. Under the RBD Act the registration of births and deaths is made compulsory. It has become mandatory on the part of head of house hold or his representative to report and register domiciliary vital events, for medical officers in charge of medical institution in respect of births and deaths occurring in these institutions. The Act also provided the statutory authority at Centre, State, District and local level. It prescribed definitions, principles, personnel and penalties connected with enforcement of the Act. It enabled Central Government to insist uniformity in registration procedures and bring out comparability in vital statistics registered in different parts of the country. Statistics of

births and deaths are compiled on the basis of Civil Registration System introduced under the Registration of Births and Deaths (RBD) Act, 1969. It is required under the Act that each vital event should be reported within 21 days from the date of occurrence of the event. This Act also provides for registration of events beyond 21 days on payment of some penalty. In the case of large delays registration can only be done after taking the permission of the District Magistrate.

National Level

At national level the Registrar General of India (RGI) administers CRS. He is empowered to issue general directions and take steps to co-ordinate and unify the activities of Chief Registrars of the States, who are the Chief Executive authority in the states for executing the provision of RBD Act 1969 and the rules and orders made there under. They were responsible for coordinating, unifying and supervising the work of CRS within their respective state.

State Level

Birth and death registration in Chhattisgarh has come in to force through the “Chhattisgarh birth and death registration rule 2001”.

In Chhattisgarh, prior to 2008, registrations were being done by police stations but, since January 2008 this job was transferred to local urban & rural bodies. The primary registration unit in rural area is gram Panchayat. There are around 10977 gram panchayats covering more than 19000 villages in the 27 districts of Chhattisgarh. Gram Panchayat secretary is the registrar in the Gram Panchayat. These gram panchayats register the births and deaths occurred within their jurisdiction. In the urban areas Chief Municipal Officers (CMO) are designated as registrar of birth and death. And in the institutions, Sub Health Centers (SHCs) are designated sub registrars and Community Health Centers & Primary Health Centers are registrars.

Organizational Setup in the State¹

- **Chief Registrar**

The Commissioner cum Director of Directorate of Economics & Statistics, Government of Chhattisgarh is the Chief Registrar of Births and Deaths.

- **Divisional Chief Registrar**

The Divisional Commissioner, Government of Chhattisgarh is the Divisional Chief Registrar of Births and Deaths.

¹ As per 2014 situation

- **Additional Chief Registrar**

The District Collector is the Additional Chief Registrar of Births and Deaths.

- **Assistant Additional Chief Registrar**

The Chief Executive officer of Jila(district) Panchayats is the Assistant Additional Chief Registrar of Births and Deaths.

- **District Registrars**

The District Planning and Statistical Officers of 27 districts in the State are functioning as the District Registrars for Rural area. And the Nagar Palik Nigam Commissioner and the Chief Municipal Officers are the District Registrars of Urban Areas.

- **Additional District Registrars**

The Chief Executive Officers of the Janpad Panchayats are the Additional District Registrars of Births and Deaths.

- **Registrars**

The Secretaries of Gram Panchayats, Medical Officers of Community Health Centers, Medical Officers of Primary Health Centers are functioning as the Registrars of births and deaths.

- **Sub Registrars**

The Medical Officers (ANM) of Sub Health Centers are functioning as the Registrars of births and deaths.

The Process

The data reporting forms contain details of birth, death and still birth. Birth registration form contains information on date of occurrence/registration, usual residence of mother, place of birth, sex and weight of the child, order of birth, type of medical attention at birth, type of delivery and characteristics of the parents including their name, age, religion, educational status, occupation etc. In the case of death, information includes name, sex, age, marital status, religion, occupation, usual residence of the deceased, place of occurrence, date of occurrence/registration, cause of death, whether medically certified or not and kind of medical attention received at the time of death and characteristics of the mother, pregnancy period etc. in the case of still births.

These forms have two parts: legal and statistical. The statistical part of the vital events registered in the registration units are entered in CS Pro² software, and after the Data entry done in the districts, Data processing assistants upload all the files of the data entries in Chhattisgarh CRVS MIS Website. For the preparation of Annual vital statistics report 2014, the Vital Statistics Section of DES downloads the data sets from the Website and generates all tables.

The Vital Statistics Division of the DES prepares this report as per the methodology and instructions issued by the Registrar General of India (RGI) from time to time. The report contains district-wise statistics of births, deaths, infant deaths, still births and the related vital rates.

Limitations of the data

As far as the level of registration is concerned Chhattisgarh has got 132.65 per cent record in the registration of births (which includes delayed registration) and 86.2 per cent in the case of deaths. As per the year on year data or net registration rate Chhattisgarh was able to register 89.4 per cent of the births that was estimated to take place in 2014. Hence a lot of vital events are still unregistered. This may be due to lack of awareness about the need and importance of registration of births and deaths and lack of registration procedure knowledge among the public. This may affect the quality of the statistical data. Efforts are being taken to create mass awareness about the importance and necessity of registration.

Status of Reporting

The local bodies, viz., the panchayats, municipalities and Municipal corporations, Community Health Centers, Primary Health centers, Sub Health Centers, District Hospitals and the other hospitals function as the registration units of vital events in the State. The details of registration units (Rural, Urban & Institution) are shown in table A1. Utmost care has been given for the above process avoiding duplications and omissions, and eventually a cent per cent reporting was achieved in rural as well as urban areas and institutions.

² An application developed in-house in CS Pro.

2. Analysis of Vital Events –Live Births

The criteria followed for including the vital events are “Place of occurrence of events” and “Year of Registration”. By using the above methodology vital events are registered in the 11362 registration units and the number of live births registered during 2014 was 845377.

The registered live births by sex are presented in table 2.3. This table shows that number of male births is greater than female birth. Out of total live births registered, 50.9% are males and 47.5% are females. However for 13760 events, sex is not reported in 2014.

Live birth by Sex:

<i>Sex</i>	<i>No. of births registered</i>	<i>%</i>
Male	430059	50.9
Female	401518	47.5
Not stated	13760	1.6
Total	845337	100

2.1 : Distribution of registered total live births by sex:

2.2 : District wise sex ratio at birth of net registration (2014):

Live births by Urban/Rural:**2.3 : Distribution of registered total live births Urban/Rural:**

2014	Total	%
Urban	271611	32.1
Rural	573726	67.9
Total	854337	100.0

2.3.1 : Percentage distribution of registered live births Rural (Within 21 and delayed):

2.3.2 : Percentage distribution of registered live births Urban (Within 21 and delayed):

Every vital event is expected to be reported within 21 days from the date of occurrence of the event. Even though the existence of a vigilant system of birth registration at the place of delivery (hospital) itself, there were delayed registrations. During the year 2014, 49.9% of overall births registered were delayed registrations in the rural sector whereas in urban sector; only 34.9% were delayed registrations.

Live births by month of occurrence:

Month wise number and percentage of registered live births are shown in the table mentioned below. By analysing the seasonal live births, it is evident that highest number of live births were registered during the month December is(22.1%) and the number of registration is least during the month February(4.7%).

2.4 : Month wise distribution of live birth registration:

<i>Month</i>	<i>No. of live births Registered</i>	<i>%</i>
January	44675	5.3
February	39881	4.7
March	42561	5.0
April	46004	5.4
May	48439	5.7
June	49556	5.9
July	53142	6.3
August	52020	6.2
September	60574	7.2
October	99951	11.8
November	121621	14.4
December	186913	22.1
Total	845337	100.0

2.4.1 : Month wise distribution of live birth registration:**Live birth by medical attention at birth:**

The table below represents the distribution of live birth by type of medical attention received at the time of delivery. A major portion of live births have occurred in an institutional framework. The emergence of numerous hospitals both in Government as well as private sector with specialist services across the State have contributed largely for a safe and hygienic delivery. In spite of having enough modern medical facilities across the State, in the rural sector, 49.6% of live births are still attended by the traditional birth attendant/relatives. It is worthwhile to mention that in rural sector, only, 44.4 % of live births are attended by trained health professionals or occurred at health care institutions and in the urban sector 80.3% are institutional births. It is also noted that in the urban

sector, a major portion of live births have occurred in government hospitals, whereas, in rural sector, major portion of live births attended by the traditional birth attendants.

2.5 : Distribution of registered live birth by medical attention at birth:

<i>Urban/ Rural</i>	<i>Institutional : Govt.</i>	<i>Institutional :Non-Govt.</i>	<i>Doctor, Nurse or trained midwife</i>	<i>Traditional birth attendant</i>	<i>Relatives or others</i>	<i>Not stated</i>
Urban	121086	71979	24906	24482	9809	19349
Rural	194486	19080	41318	254519	29825	34498

2.5.1 : Percentage distribution of live birth registration (Urban):

2.5.2 : Percentage distribution of live birth registration (Rural):**Live birth by method of delivery:**

The table below gives the distribution of registered live births occurred in institutions by method of delivery. Among the number of live births in the Govt. Hospitals, 93.0% are normal deliveries and 4.4% are caesareans. Similarly, among the Live births in the private hospitals, 63.2% are normal and 32.9% are Caesarean. Also it reveals that among the total delivery in the Government hospitals and private hospitals, normal deliveries are more than that of caesarean.

2.6 Distribution of registered live births by institutions and method of delivery:

<i>Type of delivery</i>	<i>Normal</i>	<i>Caesarean</i>	<i>Forceps/Vacuum</i>	<i>Not stated</i>	<i>Total</i>
Institutional :Govt.	293556	13888	2272	5856	315572
Institutional :Non-Govt.	57541	29934	2233	1339	91047

2.6.1 : Percentage distribution of registered live births by institutions and method of delivery:

2.6.2 : Percentage distribution of registered live births in government institutions and method of delivery:

2.6.3 : Percentage distribution of registered live births in Private institutions and method of delivery:

Live births by age of mother and birth order:

The table below represents the percentage distribution of live births by age of mother and birth order. The data shows that highest number of live births were reported for the mothers in the age group of 20-24(53.3%), followed by the age group 25-29 (30.0%) and there after it declined gradually with increase in age. It is to be noted that 2.5 % of live births belong to the age group 15-19. This shows that the girls are getting married before the age of 18 years and giving birth to children and only a 0.1 % of births occur in the age group above 45 years.

Among the registered births, 44.3% are of first order followed by second order and there after it gradually declined for higher birth orders. This phenomenon explains the State's low fertility levels. This pattern is similar to both rural and urban areas. This is evident from the chart given below.

2.7 : Percentage distribution of registered live births by age of mother and birth order:

Mothers age at birth (grouped)	Birth order										Total
	1	2	3	4	5	6	7	8	9	Not Stated	
Below 15	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	0.0	9.4	0.5
15-19	5.0	0.5	0.0	0.0	0.0	0.0	0.0	0.0	0.0	2.8	2.5
20-24	75.8	49.1	18.7	6.3	2.9	2.0	2.3	2.4	0.0	20.6	53.3
25-29	15.6	41.1	57.7	45.9	27.7	15.5	10.9	7.9	0.0	7.1	30.0
30-34	2.3	6.9	16.6	32.5	40.7	39.4	29.5	22.0	3.3	1.8	7.1
35-39	0.5	1.7	5.7	12.1	22.4	31.8	39.3	39.0	7.1	0.5	2.3
40-44	0.1	0.2	0.6	1.6	4.1	7.4	13.1	19.4	2.7	0.1	0.3
45 & above	0.0	0.1	0.1	0.7	1.3	3.0	3.6	8.4	1.7	0.0	0.1
Age not stated	0.7	0.5	0.6	0.9	0.9	0.8	1.3	1.0	85.1	57.7	3.9
Total	43.8	33.2	12.4	3.4	1.0	0.3	0.1	0.0	0.2	5.4	100.0

2.7.1 :- Percentage distributions of registered live birth by birth order:

Live births by Educational level of mother and father:

The table below shows the percentage distribution of educational level of mother and father of the new born which reveals that 10.0% of live births have occurred to illiterate mothers. The percentage of live birth is highest for parents of literacy level literate but below class 5 and thereafter it declined gradually with increase in levels of education. The table below also shows that 12.8% of mothers and 10.5% of fathers, education level is not mentioned.

2.8 Registered live births by Educational level of mother and father:

<i>Education level</i>	<i>Mother</i>	<i>Father</i>
Non literate	88720	57027
Literate and Below class 5 (Primary)	270434	195046
Class 6 to 8 (Middle)	184572	199770
Class 9 to 10 (Secondary)	101737	136249
Class 11 to 12 (Higher Secondary)	56744	102094
Diploma / Certificate	4868	8333
Graduate & above	30149	47053
Not stated	108007	87462

2.8.1 Percentage distribution of registered live births by educational level of parents :

Live birth by religion:

Religion wise analysis of live births represents that out of the total 845337 live births, 96.7% belong to Hindu Community, 1.1% belongs to Muslim Community, 0.1 belongs to Sikh Community and 0.9% belongs to Christian Community. Again a scant 1.1 % didn't disclose their religion. High order births are more in Hindu community.

2.9 : Percentage distribution of registered live birth by religion of the family:

Live birth by duration of marriage and birth order:

The table below represents the distribution of live birth by duration of marriage of mother and birth order. It reveals that 55.7% - of births occurred to young couples having duration of marriage 0-4 years and 29.4% of live births occurred within 5-9 years after marriage. As the marriage duration goes up shifting of births to higher order can be observed.

2.10 : Number distribution of registered live birth by duration of marriage of mother:

<i>Duration of Marriage</i>	<i>No. of Live birth Rgtd.</i>
0-4	470881
5-9	248246
10-14	56453
15-19	13353
20-24	2845
25-29	503
30 & above	156
Not Stated	52900
Total	845337

2.10.1 Percentage distribution of registered live birth by duration of marriage of mother:

Live births by duration of pregnancy and birth weight:

One of the important causes of still birth and infant death is due to premature delivery. Again premature babies having low birth weight (less than 2.5kg) are susceptible to diseases. Among the live birth registered during the year 2014, 13.17% were born with low birth weight. A clear association between duration of pregnancy and birth weight can be observed from Table 2.10 and it reveals that 36.85% of babies had birth weight between 2.500-3.000 kg. and 48.52% of babies had weight between 3.000 -4.000 kg and only 1.4 % of babies had birth weight above 4.000kg. Also it can be seen that 68.02% deliveries occurred within the pregnancy period 37-39 weeks and only 0.57% deliveries occurred below the pregnancy period 32 weeks.

2.11 : Percentage distribution of registered live birth by duration of pregnancy and birth weight:

Live births by age of mother and birth weight:

The table below shows the percentage distribution of live birth by age of mother and birth weight. It is observed that cases of low birth weight babies are more to mothers in the higher age group of 20-24 (5.3%) followed by the age group 25.29 (2.8%) It is observed that 4.0% of babies having birth weight between 3.000-4.000 kg were born to mothers in the age group 20-24.

2.12 : Registered live births by age of mother and birth weight (rural & urban):

Mothers age at birth (grouped)	Birth Weight(in Kgs)					Not Stated	Total
	<=1.5	1.5- 2.0	2.1 - 3.0	3.1 - 4.0	4.1+		
Below 15	0.0	0.0	0.0	0.0	0.0	0.5	0.5

Live birth by method of delivery and age of mother:

The delivery characteristics by mother's age are presented in the table below. As we analyses mother's age group, it can be observed that caesarean deliveries are more in the case of mothers belonging to the age group of 20-24 and 47.3% of normal deliveries belong to mothers of age group 20-24. Also it shows that among the total deliveries, 86.1% are normal and only 5.3% are Caesarean.

2.14 : Percentage distribution of registered live birth by method of delivery and age group :

3. Analysis of Vital Events –Deaths

Deaths by sex

There were 172805 deaths registered in the state during the year 2014. Table 3.1 provides the distribution of registered deaths in the state during 2014. Out of the total 172805 registered deaths, males constitute 56.3%. (97338) and females constitute 40.3 % (69578) which shows that male deaths were more than that of female. The Rural /Urban classification reveals that in the state during the year 2014, 70.0% of deaths were registered in rural area and 30.0% of deaths were registered in urban area.

3.1 :Registered total deaths by sex:

<i>Sex</i>	<i>No. of deaths registered</i>	<i>%</i>
Male	97338	56.3
Female	69578	40.3
Not stated	5889	3.4
Total	172805	100.0

3.2 District wise sex ratio at death of net registration:

Deaths in Urban and Rural:

3.3 Registered total deaths by urban and rural:

<i>Rural/Urban</i>	<i>No. of deaths registered</i>	<i>%</i>
Rural	121027	70.0
Urban	51778	30.0
Total	172805	100.0

3.3.1 : Percentage distribution of registered total deaths by urban and rural:

Delayed Registration of death events

During the year 2014, out of 172805 deaths registered, 34247 were delayed registrations Whereas 138558 deaths were registered within the prescribed time limit (within 21 days of occurrence). During the year 2014, 19.9% births registered were delayed registrations in the rural sector where as in urban sector, 19.6% were delayed registrations

3.4 Delayed Registration of death events:

<i>Rural/Urban</i>	<i>Within 21 days</i>	<i>Delayed registration</i>	<i>%</i>
Rural	56.1	14.0	70.0
Urban	24.1	5.9	30.0
Total	80.2	19.8	100.0

Deaths by month of occurrence:

Below mentioned table gives the registered deaths according to the month of registration. Highest percentage of deaths were registered in November (11.2%) and the lowest were registered in April (6.2%).

3.5 Registered deaths by month of occurrence:

<i>Month</i>	<i>No. of Regtd. Deaths</i>	<i>%</i>
January	12758	7.4
February	11198	6.5
March	11092	6.4
April	10647	6.2

3.6.3 Percentage distribution of registered deaths by type of medical attention at death in Rural:

Deaths by religion and age-2014:

Percentage distribution of registered deaths by religion is presented in table mentioned below. 96.7% of deaths were reported from Hindus, 0.9% from Muslims, 1.1% from Christians, 0.1% from Sikh, 0.1% from Jain and 0.1% from other religions which includes Buddhist, Parsi and other religion. The percentage of deaths observed was highest in the age group 65 to 74 years for all religions. It is evident from the table below that male deaths were more than that of female deaths for all religions in this state.

The table below depicts the age pattern of mortality in the State by sex. It can be seen that percentage of male deaths is higher than that of females in all the age group.

3.7 : Distribution of registered deaths by religion:

<i>Religion</i>	<i>No. of Deaths</i>	<i>%</i>
Hindu	167168	96.7
Muslim	1518	0.9

3.9.1 : Percentage distribution of registered deaths by age group:

4. Analysis of Vital Events – Infant Deaths

Infant deaths by sex:

The table given below presents the percentage distribution of infant deaths in the state for the year 2014. Out of 10922 infant deaths registered, 64.5% infant deaths occurred in rural area and 35.5% occurred in urban area. It is observed that male infants experienced higher mortality than female infant. Table 4.3 shows that percentage of male among infant death is 55.0% and female is 43.0% whereas for 2.0% sex is not stated.

4.1 Distribution of registered Infant deaths by Rural/Urban:

<i>Rural/Urban</i>	<i>No. of Registered Infant Deaths</i>	<i>%</i>
Rural	7045	64.5
Urban	3877	35.5
Total	10922	100.0

4.1.1 : Percentage distribution of registered Infant deaths by Rural/Urban:

4.2 Distribution of registered infant deaths by sex:

<i>Male/Female</i>	<i>No. of Events</i>	<i>%</i>
Male	6007	55.0
Female	4695	43.0
Not Stated	220	2.0
Total	10922	100.0

4.2.1 : Percentage distribution of registered infant deaths by sex:

Infant Deaths by age:

Percentage distribution of infant death by age is presented in the Table 4.5. The data reveals that 50.7% of infant deaths have occurred to the infants aged less than or equal to seven days. 12.3% of infant death belongs to the age group between 8-28 days and 37.0% belongs to the age group 29 days to 1 year. Thus it can be concluded Chhattisgarh majority of infant death occurred within 7 day of birth. The similar pattern could be observed in rural and urban areas.

Distribution of registered infant deaths by age:

<i>Age Group</i>	<i>Male</i>	<i>Female</i>	<i>NS</i>	<i>Total</i>
7 days	27.9	22.0	0.8	50.7
8 - 28 days	6.3	5.8	0.3	12.3
29days - 1 year	20.8	15.3	0.9	37.0
Total	55.0	43.0	2.0	100.0

4.3 Distribution of registered infant deaths by age and by Rural/Urban:

<i>Age Group</i>	<i>Rural</i>	<i>Urban</i>	<i>Total</i>
7 days	26.5	24.2	50.7
8 -28 days	8.0	4.3	12.3
29days - 1 year	30.1	6.9	37.0
Total	64.5	35.5	100.0

4.3.1 Percentage distribution of registered infant deaths by age -Total:

4.3.2 : Percentage distribution of registered infant deaths by age -Rural:

4.3.3 :Percentage distribution of registered infant deaths by age -Urban:

5. Analysis of Vital Events – Still Births

Registered total still births by sex –2014:

There were 4950 stillbirths registered in the state during the year 2014. Table 5.1 provides the percentage distribution of registered stillbirths by sex. It can be noticed from the table that percentage of male still births (54.1%) are greater than that of female still births (44.8%).

5.1 Distribution of registered still births by sex-2014:

<i>Sex</i>	<i>No. of still births registered</i>	<i>%</i>
Male	2680	54.1
Female	2218	44.8
Not stated	52	1.1
Total	4950	100.0

5.1.1 :Percentage distribution of registered still births by sex:

5.2 Distribution of registered still births by Rural/Urban:

<i>Rural/Urban</i>	<i>Male</i>	<i>Female</i>	<i>NS</i>	<i>Total</i>
Rural	24.7	21.7	0.6	47.0
Urban	29.4	23.1	0.5	53.0
Total	54.1	44.8	1.1	100.0

5.2.1 :Percentage distribution of registered still births by Rural/Urban:**Still births by age of mother:**

Table 5.5 describes the distribution of still births by age of mother at birth. It is evident from the table that the incidence of still birth is more in the case of mothers belonging to 20 to 24 years age group followed by the 25 to 29 years age group. The incidence of still birth was very low for all other age groups of mothers.

5.3 Distribution of registered still births by age of mother:

<i>Age Group of Mother</i>	<i>Rural</i>	<i>Urban</i>	<i>Total</i>
Below 15	3.8	4.5	8.3
15 - 19	1.5	1.6	3.1
20 - 24	18.2	20.3	38.4
25 - 29	14.5	10.8	25.3
30 - 34	2.3	4.1	6.4
35 - 39	1.1	1.6	2.6
40 - 44	0.2	0.1	0.3
45 & above	0.1	0.1	0.2
Not Stated	5.4	10.1	15.4
Total	47.0	53.0	100.0

5.3.1 :Percentage distribution of registered still births by age of mother:

Still births by duration of pregnancy:

Percentage distribution of still births by duration of pregnancy is given in Table 5.7. For 54.3% of still births, duration of pregnancy is during the 32-36 weeks and 23.7% of still births have occurred during the pregnancy period 37-39 weeks.

5.4 Distribution of registered still births by duration of pregnancy:

<i>Duration of Pregnancy</i>	<i>To. SB Registered</i>	<i>%</i>
<32	484	9.8
32 - 36	2686	54.3
37 - 39	1171	23.7
40	0	0.0
41+	143	2.9
Not stated	466	9.4
Total	4950	100.0

5.4.1 Distribution of registered still births by duration of pregnancy:

Still births by type of medical attention received:

The table given below gives the percentage distribution of still births by type of medical attention received at the time of birth. It is observed that 90.0% of still births have occurred in institutions. Out of 4230 stillbirths occurred in institutions, 81.0 % were reported from Government Institution and 9.0% were from private medical institutions.

5.5 Distribution of registered still births by type of medical attention received at the time of Still birth:

<i>Type of Medical attention</i>	<i>%</i>
Institutional : Government	81.0
Institutional : Non- Government	9.0
Doctor, Nurse or trained midwife	5.7
Traditional birth attendant	3.8
Relatives or others	0.6
Total	100.0

5.5.1 :Percentage distribution of registered still births by type of medical attention received at the time of Still birth:

6. Analysis of Vital events and rates

6.1 Number of registered live births 2010-14:

6.2 Number of registered deaths 2010-14:

6.3 Level of Registration of Birth-2001-2014, Chhattisgarh:**6.4 Level of Registration of Death – 2001-2014, Chhattisgarh:**

6.5 Percentage distribution of registered infant deaths:

7. Conclusion:

It is worthwhile to mention that CRVS is the only authentic source, which can provide vital rates for sub district level. There is also a need to correctly identify the maternal deaths for estimating the vital indicator MMR. Full coverage of maternal deaths and infant deaths by registration machinery only can help to calculate rates such as IMR, MMR etc., which are essential for health planning. Hence more effort should be given to the proper implementation and monitoring of Civil Registration System in Chhattisgarh.

Again certain flaws have been noticed while processing the data received from the registration authorities. These defects might have been occurred during the reporting of events. Normally the primary data on vital events are collected at the place where the event happened, the hospital, Gram Panchayats and Urban local Bodies lack knowledge regarding the schedule (CRVS Formats) and the reporting procedure tend to create mistakes which generally cannot be rectified at any further stages of data entry or data processing.
