PREFACE

Directorate of Economics and Statistics, Chhattisgarh has conducted a survey in entire Chhattisgarh at the sample basis under the guidance of National Statistical Office (NSO) Ministry of Statistics and Programme Implementation, Government of India in its 76th round on "Drinking Water, Sanitation, Hygiene and Housing Condition". Report on this survey prepared on data of State sample which is collected during July 2018 - December 2018 in 76th round through schedule 1.2.

The objective of this survey is to collect information about rural and urban dwelling unit of the households like type of dwelling unit, structure of the dwelling unit condition of the structure, facilities available to the households in the respect of the drinking water, sanitation etc. and micro environment surrounding the house in Chhattisgarh state during the survey period.

The technical guidance including designing of survey schedule, methodology etc. provided by NSO, Government of India is highly acknowledged.

I hope the report will be useful to planners, policy makers, academicians and researchers. I admire the work done by the supervisors, field staff who worked hard to make the survey a success and all the staff and officers who dealt with data and contributed in different ways to the success of the survey and the subsequent preparation of the report first time. Suggestions for improvement in content, layout and other aspects of this report will be highly appreciated.

Place: Nava Raipur

Date: March 2023

Amrit Vikas Topno
Director

Involvement of Officers and Staffs

Field Work

State sample data collection by District level and DES Investigators.

Field Supervision done by District level and DES Assistant Statistical Officers.

Data Entry and Validation (State Sample)

Investigators of Districts and DES who were Involved in Survey

(Software Developed by DPD, NSSO, Government of India)

Tabulation Exercise and Report Writing

Shri Surendra Singh Thakur (Assistant Director)

SmtDeepali Das (Assistant Statistical Officer)

(Tabulation Software Developed by DPD, NSSO, Government of India)

Officers Who Guided NSS Division:

ShriN. Buliwal (Joint Director)

Shri Dinesh Kumar Tiwari (Deputy Director)

Shri A. K. Shrivastava (Assistant Director)

Shri Surendra Singh Thakur (Assistant Director)

CONTENTS

<i>Chapters</i>	Page No.
<i>Chapter One</i> Introduction	1 - 2
<i>Chapter Two</i> Concept and definition	3 - 12
<i>Chapter Three</i> Result and Findings	13 - 29
Appendix A Detailed Tables	
Appendix B Sample and Estimation Procedure	
Appendix c Schedule 1.2

Highlights

- ❖ The report is based on 'Drinking Water, Sanitation, Hygiene and Housing Condition' survey of NSS 76th round conducted during July - December 2018 for Chhattisgarh State sample through total 180 out of that 114 samples for rural area and 66 samples were for urban area.
- ❖ Estimated number of households(00) 54342, persons(000) 24617, average households size 4.5 .
- ❖ The major source of drinking water of the household was hand pump in the rural areas and piped water into dwelling in the urban areas.
- ❖ About 50.70 percent of the households in the rural areas used hand pump as the principal source of drinking water and about 52.40 percent of the households in the urban areas used piped water into dwelling as the principal source of drinking water.
- ❖ About 31.9 percent of the households in the rural areas and about 72.8 percent of the households in the urban areas had exclusive access to principal source of drinking water.
- ❖ About 56.6 percent of the households in the rural Chhattisgarh used sufficient drinking water throughout the year from community use public source unrestricted.
- ❖ About 53.7 percent of the households in the rural areas of Chhattisgarh do not treat drinking water while 23.7 percent household of urban areas do not treat drinking water.
- ❖ About 47.7 percent of the households in the rural areas and about 96.3 percent of the households in the urban areas had access to bathroom.
- ❖ Among the households which had access to bathroom, about 41.3 percent in the rural areas and about 82.5 percent in the urban areas had exclusive access to bathroom.
- ❖ About 30.8 percent of the households in the rural areas and about 73.9 percent of the households in the urban areas used bathroom attached to the dwelling area.
- ❖ In rural Chhattisgarh about 90.2 percent of the households and about 92.6 percent of the households in the urban areas of Chhattisgarh had access to latrine.

- ❖ The major type of latrine used by the rural households was flush/pour-flush to twin leach pit that is 46.4 percent followed by flush/pour-flush to septic tank about 34.5 percent and in urban household used flush/pour-flush to septic tank that is about 70.8 percent in Chhattisgarh.
- ❖ Percentage distribution of households by practice of hand washing before meal in rural areas with water and soap/detergent was about 30.5 percent and in urban areas it was 69.5 of Chhattisgarh
- ❖ Percentage distribution of households by practice of hand washing after defecation in rural areas with water and soap/detergent was about 77.2 percent and in urban areas it was 99.4 percent in Chhattisgarh.
- ❖ The percentage distribution of households by tenurial status of owned dwelling unit at rural and urban level were 96.6 and 68.3 respectively in Chhattisgarh.
- ❖ Among the households living in houses, about 94.2 percent of the households in the rural areas and about 92.9 percent of the households in the urban areas used the house for residential purpose only.
- ❖ Among the households living in houses, about 62.2 percent of the households in the rural areas and about 95.2 percent of the households in the urban areas had the house of pucca structure.
- ❖ Among the households living in houses, about 13.8 percent of the households in the rural areas and about 85.0 percent of the households in the urban areas had drainage system in the house for disposal of waste water/liquid waste.
- ❖ Among the households living in houses, about 66.8 percent of the households in the rural areas and 10.2 percent of the households in urban areas disposed of household waste water without treatment to openlow land areas/streets.
- ❖ Among the households living in houses, about 87.4 percent of the households in the rural areas disposed of household garbage either in household's individual dumping spot or in a common place other than community dumping spot. In the urban areas, about 29.20 percent of the households disposed of household garbage either in community dumping spot or in a common place other than community dumping spot.
- ❖ Among the households living in houses, about 92.1 percent of the households in the rural areas had no arrangement for collection of household garbage. In the urban areas, Panchayat / Municipality / Corporation made arrangement for collection of household garbage about 80.1 percent of the households.

CHAPTER – ONE

INTRODUCTION

The National Statistical Office (NSO), Ministry of Statistics and Programme Implementation (MOSPI), Government of India, since its inception in 1950 has been conducting nation-wide large scale sample surveys, employing scientific sampling methods, to collect data on diverse economic aspects. All the states in the country participate in these surveys on a matching sample basis in terms of the number of samples (villages/ urban frame survey blocks) allotted for the central sample. In its 76th round survey, Directorate of Economics and Statistics, Chhattisgarh has carried out this survey under the guidelines and technical support of NSO on ‘Drinking Water, Sanitation, Hygiene and Housing Condition’ during July - December 2018 .

Housing is a basic requirement of human well-being. Information in respect of the dwelling unit of the households like type of the dwelling unit (viz. independent house, flat etc.), tenurial status of dwelling unit (viz. owned, hired, no dwelling etc.), structure of the dwelling unit (viz. pucca, semi-pucca, katcha), condition of the structure (viz. good, satisfactory, bad), floor area of the dwelling unit, age of the house owned by the household, etc. along with the facilities available to the households in respect of drinking water, sanitation etc. and micro environment surrounding the house like drainage system of the house, system of disposal of household waste water, system of disposal of household garbage, problems of flies and mosquitoes etc. are important determinants of overall quality of living condition of the household members. The objective of the survey on ‘Drinking Water, Sanitation, Hygiene and Housing Condition’ of NSS 76th round was to collect relevant information on all these aspects and develop suitable indicators to assess living conditions of the household members at the national and State/UT level.

About the survey

Survey period:- The field work of 76th was carried out during July 2018 to December. The survey was conducted in two sub-rounds of three months each during the period.

Sample size:- The data on Drinking Water, Sanitation, Hygiene and Housing Condition was collected in 76th round for Chhattisgarh State sample through total 180 out of that 114 samples for rural area and 66 samples were for urban area.

Schedules of enquiry:- Through the survey on ‘Drinking Water, Sanitation, Hygiene and Housing Condition’ of NSS 76th round, some important information collected from the sample households was on (i) tenurial status of the dwelling unit, (ii) Type of the dwelling unit, (iii) condition of the structure of the dwelling unit, (iv) drainage system of the household, (v) system of disposal of household waste water,

(vi) system of disposal of household garbage, (vii) number of rooms and floor area of the dwelling unit, (viii) type of material used for construction of roof, wall and floor of the dwelling unit, (ix) age of the house owned by the household, (x) construction /first hand purchase of houses/flats by the household for residential purpose, (xi) availability of electricity in the household for domestic use, (xii) problems of flies and mosquitoes faced by the household, (xiii) sources and sufficiency of drinking water of the household, (xiv) distance to the principal source of drinking water of the household, (xv) type of access of the household to the principal source of drinking water, (xvi) treatment and storage of drinking water by the household, (xvii) access of the household to bathroom, (xviii) type of bathroom used by the household members, (xix) access of the household to latrine, (xx) type of latrine used by the household members, (xxi) reason for not using latrine by the household members despite the household having access to latrine, (xxii) disposal of faeces for children of age below three years, (xxiii) availability of water in or around the latrine used by the household etc.

Geographical Coverage: - The survey on 'Drinking Water, Sanitation, Hygiene and Housing Condition' covered the entire rural and urban area of Chhattisgarh state with equal matching of central sample

Sample Design: - stratified two stage design was adopted for the NSS 76th round survey where the first stage units (FSU) were villages/UFS blocks/sub-units (SUs) and the ultimate stage units (USU) were households in both the sectors.

For canvassing Schedule 1.2, in each FSU, two Second Stage Strata (SSS) were formed viz. (i) SSS1: households having MPCE $\geq A$ and (ii) SSS2: households having MPCE $< A$ where, the cut-off point 'A' was determined for each NSS region for both rural and urban areas separately, from the survey on Domestic Tourism Expenditure of NSS 72nd round, in such a way that top 10% of the population had MPCE more than or equal to 'A'. In each FSU, 2 and 10 households were selected from SSS1 and SSS2 respectively for canvassing Schedule 1.2.

Contents of the report

This report contains three chapters, including the present introductory chapter (Chapter One), and three appendices. Chapter Two describes the concepts and definitions of those terms used in the survey in connection with the various items covered in this report. The Results and Findings are presented and discussed in Chapter Three. Appendix A gives a detailed description of the sample design and estimation procedure used for the survey. The detailed tables forming the basis of this report are presented in Appendix B. And Appendix C gives a facsimile of the schedule 1.2 canvassed.

Chapter Two

Concepts and Definitions

Concepts and definitions of some important terms used in this report are described below.

Population coverage: The following rules regarding the coverage of population were adhered to in listing of households and persons during the survey operation.

1. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes etc., were excluded, but residential staff therein was listed while listing was done in such institutions. The persons of the first category were considered as members of their parent households and were counted there. Convicted prisoners undergoing sentence were outside the coverage of the survey.

2. Floating population, i.e., persons without any normal residence were not listed. But households residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place, were listed.

3. Neither foreign nationals nor their domestic servants were listed, if by definition the latter belonged to the foreign national's household. If, however, a foreign national became an Indian citizen for all practical purposes, he or she was covered.

4. Persons residing in barracks of military and paramilitary forces (like police, BSF, etc.) were kept outside the survey coverage due to difficulty in conduct of survey therein. However, civilian population residing in their neighbourhood, including the family quarters of service personnel, were covered.

5. Orphanages, rescue homes, *ashrams* and vagrant houses were outside the survey coverage. However, persons staying in old age homes, students staying in *ashrams/hostels* and the residential staff (other than monks/nuns) of these *ashrams/hostels* were listed. For orphanages, although orphans were not to be listed, the persons looking after them and staying there were considered for listing.

House: Every structure, tent, shelter, etc. was considered as a house irrespective of its use. It might have been used for residential or non-residential purpose or both or even might have been vacant.

Household: A group of persons who normally lived together and took food from a common kitchen constituted a household. It included temporary stay-aways (those whose total period of absence from the household was expected to be less than 6 months) but excluded temporary visitors and guests (expected total period of stay less than 6 months). Even though the determination of the actual composition of a household was left to the judgment of the head of the household, the following procedures was adopted as guidelines.

(i) Each inmate (including residential staff) of a hostel, mess, hotel, boarding and lodging house, etc., was considered as a single-member household. If a group of persons among them normally pooled their income for spending, they were

considered to form a single household. For example, a family living in a hotel was treated as a single household.

(ii) In deciding the composition of a household, more emphasis was given on 'normally living together' than on 'ordinarily taking food from a common kitchen'. In case the place of residence of a person was different from the place of boarding, he or she was treated as a member of the household with whom he or she resided.

(iii) A resident employee, or domestic servant, or a paying guest (but not just a tenant in the household) was considered as a member of the household with whom he or she resided even though he or she was not a member of the same family.

(iv) When a person usually slept in one place (say, in a shop or in a room in another house because of space shortage) but took food with his or her family, he or she was not treated as a single member household but as a member of the household in which other members of his or her family stayed.

(v) If a member of a family (say, a son or a daughter of the head of the family) stayed elsewhere (say, in hostel for studies or for any other reason), he/she was not considered as a member of his/her parent's household. However, he/she was listed as a single member household if the hostel was listed.

Household size: Total number of persons in the household constituted the household size.

Household premises: For this survey, household premises was defined as the dwelling unit of the household together with the courtyard, compound, garden, out-house, place of worship, garage, family graveyard, guest house, shop and offices for running household enterprises, tanks, wells, latrines, drains and boundary walls annexed to the dwelling unit which were under the possession of the household (possessed exclusively or possessed with some other households).

Dwelling unit: In this survey, dwelling unit was defined as the accommodation availed of by a household for its residential purpose. It might be an entire structure or a part thereof or consisting of more than one structure. There might be cases of more than one household occupying a single structure such as those living in independent flats or sharing a single housing unit, in which case, number of dwelling units was same as the number of households sharing the structure. There might also be cases of one household occupying more than one structure (i.e. detached structures for sitting, sleeping, cooking, bathing etc.) for its housing accommodation. In this case, all the structures together constituted a single dwelling unit. In general, a dwelling unit consists of living room, kitchen, store, bath, latrine, garage, open and closed veranda etc. A structure or a portion thereof used exclusively for non-residential purposes or let out to other households did not form part of the dwelling unit of the household under consideration. However, a portion of a structure used for both residential and non-residential purposes was treated as part of the dwelling unit except when the use of such portion for residential purpose was very nominal. The dwelling unit covered all pucca, semi-pucca and katcha structures used by a household. Households living more or less regularly in tents,

under bridges, in pipes, under staircase, in purely temporary flimsy improvisations built by the road side (which are liable to be removed at any moment) etc., were considered to have no dwelling.

Independent house: A dwelling unit was considered as an independent house if it had a separate structure and the structure was not shared with any other household. In other words, if the dwelling unit and the entire structure of the house were physically the same, it was considered as an independent house. In some parts, particularly in rural areas, two or more structures together constituted a single housing unit. While the main residence was in one of the structures, the other structures were used for sleeping, sitting and for store, bath etc. In all such cases, all the structures together formed an independent house.

Flat: A dwelling unit was considered as a flat if it was a part of a structure which was shared with at least two households and the dwelling unit had housing facilities of water supply, bathroom and latrine, which were used exclusively by the households or shared with households residing in that structure. If the household reported that the facilities of water supply, bathroom and latrine were shared with other households residing in other structures, such dwelling unit was considered as flat. If households were residing in flat-like structure without any one of the housing facilities like water supply, bathroom and latrine; those structures/dwelling units were not considered as flat.

Pucca structure: Pucca structure was defined as a structure whose walls and roofs were made of pucca materials such as cement, concrete, oven burnt bricks, hollow cement/ash bricks, stone, stone blocks, jack boards (cement plastered reeds), iron, zinc or other metal sheets, timber, tiles, slate, corrugated iron, asbestos cement sheet, veneer, plywood, artificial wood of synthetic material and poly vinyl chloride (PVC) material.

Katcha structure: A structure which had walls and roof made of non-pucca materials was considered as a katcha structure. Non-pucca materials included unburnt bricks, bamboo, mud, grass, leaves, reeds, thatch, etc. Katcha structures were of two types; (i) *Unserviceable katcha structure*, which included all structures with thatch walls and thatch roof, i.e., walls made of grass, leaves, reeds, etc. and roof of a similar material and (ii) *Serviceable katcha structure*, which included all katcha structures other than unserviceable katcha structures. A structure which could not be classified as a pucca or a katcha structure was defined as semi-pucca structure. Such a structure had either the walls or the roof but not both, made of pucca materials.

Room: It was defined as a constructed area with walls or partitions on all side with at least one door way and a roof overhead. Wall/partition meant a continuous solid structure (except for the doors, windows, ventilators, air-holes, etc.) extending from floor to ceiling. A constructed space with grill or net on one or more sides in place of wall or partition was not considered as a room. In case of conical shaped

structures in which the roof itself was built to the floor level, the roof was considered as wall.

Living room: A room with floor area (carpet area) of at least 4 square meters (i.e., approximately 43 square feet), a height of at least 2 meters (i.e., approximately 6.6 feet) from the floor to the highest point in the ceiling and used for living purposes was considered as a living room. Thus, rooms used as bedroom, sitting room, prayer room, dining room, servant's room – all were considered as living rooms provided they satisfy the size criterion. Kitchen, bathroom, latrine, store, garage etc. were not considered as living rooms. A room used in common for living purpose and as kitchen or store was also considered as living room.

Other room: It was defined as a room which did not satisfy the specification of 4 square meters floor area and 2 meters height from the floor to the highest point of the ceiling or a room which though satisfied the specification, was not used for living purposes. A room which satisfied the size criterion but shared by more than one household or when used for both residential and business purposes was treated as other room.

Verandah: A roofed space adjacent to living/other room along the outside of the house and not walled from all sides was considered as verandah. In other words, at least one side of such space was either open or walled only to some height or protected by grill, net, etc. A verandah was defined as a 'covered verandah', if it was protected from all sides and an 'uncovered verandah', if it was not protected at least from one of the sides. A covered veranda could have a door also.

Sometimes verandah was used as an access to the room(s). Corridor or passage within the dwelling unit was considered as portion of a room or a verandah depending on its layout. A common corridor or passage used mainly as an access to the dwelling was not considered as verandah.

Slums: Any compact settlement with a collection of poorly built tenements, mostly of temporary nature, crowded together, usually with inadequate sanitary and drinking water facilities in unhygienic conditions, was considered as a slum by the survey, provided at least 20 households lived there. The criterion of 20 households was not restricted within an FSU only but the whole of such an area which could cut across more than one FSU. Such settlements were considered as *notified slum* if they were notified so by the concerned State governments, municipalities, corporations, local bodies or development authorities; otherwise, they were considered as a *non-notified slum*. For this survey the word 'slums' included both *notified slums and non-notified slums*.

Squatter settlement: Slum like settlements with less than 20 households were considered as squatter settlements. The criterion of 20 households was not restricted within an FSU only but the whole of such an area which could cut across more than one FSU.

Land possessed: The area of land possessed by a household was defined as an area which included land 'owned', 'leased in' and 'land neither owned nor leased in'

(i.e. encroached) by the household but excluded land 'leased out'. The total land area possessed by the household as on the date of survey was considered.

- A piece of land was considered to be owned by the household if permanent heritable possession with or without the right to transfer the title vested in a member or members of the household. Land held in owner-like possession say, under perpetual lease, hereditary tenure, long-term lease for 30 years or more, etc., was also considered as land owned.
- As regards lease, land given to others on rent or free by owner of the land without surrendering the right of permanent heritable title was defined as land leased out. Land leased in was defined as land taken by a household on rent or free without any right of permanent or heritable possession. The lease contract could be written or oral.
- For a piece of public/institutional land under the possession of the household, if the household did not have the title of ownership or did not have lease agreement for the use of land transacted, either verbally or in writing, such land was considered as 'neither owned nor leased in' i.e. otherwise possessed. Private land (i.e. land owned by the household sector) possessed by the household without title of ownership and occupancy right was not considered in the 'otherwise possessed' category. All private land encroached upon by the household was considered as leased-in land.
- Land possessed by the household members by virtue of family ties with the owner who stayed elsewhere (forms a different household), was considered as land leased in. For such owners (those found to be living away from their family members who were in possession of the land), the land was recorded as owned and leased out.
- Land owned, leased in, etc., by a particular household did not include the area of land owned, leased in, etc., by the servants/paying guests who were considered as normal members of the household. However, land owned/cultivated jointly by two or more households had been apportioned to determine the land owned/cultivated by any one of them.
- Land possessed by the households living in a block of flats was computed by apportioning the total area occupied by the building among the households in proportion to the size of the flats.

Household's usual consumer expenditure (Rs.) in a month: Household consumer expenditure (HCE) was defined as the sum total of monetary values of all goods and services consumed (out of purchase or procured otherwise) by the household on domestic account during a reference period. Household's usual monthly consumer expenditure was defined as the sum total of monetary values of all goods and services consumed by the household on domestic account with a monthly regularity. Unusual expenditures, such as, expenditure on social ceremonies, capitation fee, hospitalization etc. were excluded for deriving usual monthly consumer expenditure of the household. However, expenditure on

household durable goods was included and monthly expenditure on durable goods was derived by apportioning the total expenditure made by the household on durable goods during last 365 days.

Sources of finance for construction/first hand purchase of houses/flats for residential purpose: The different sources of finance considered for the survey are:

Own source (including own labour): This included the household labour and/or materials supplied from home, savings of the different members of the household, non-refundable amount (final withdrawal or part withdrawal drawn by some of the household members) from provident fund account by the household members, amount received from sale of assets, etc. Though this did not include materials used from free collection, the transport charges and the related hired and household labour associated with such free collection had been evaluated and recorded. Materials supplied from home had been evaluated at the ex-farm/ex-factory price.

Government: Money (including subsidy received either in cash or kind) received from the central or state governments to finance the construction had been considered under this category. When houses/flats were received free from central or state governments, the source of finance had also been considered as 'Government'.

Bank (Commercial Banks including regional rural bank, cooperative society/bank): Amount spent on construction out of money (including subsidy received either in cash or kind) taken from commercial banks, including nationalised banks, regional rural banks, State Bank of India and its associates like State Bank of Rajasthan, State Bank of Mysore, etc., and foreign commercial banks operating in India had been considered under this category. Similarly, money obtained from agencies such as cooperative society/banks, like district or central cooperative banks or other types of cooperative societies, etc. had also been included under this category.

Insurance: All loans taken from Life Insurance Corporation, Postal Life Insurance and other insurance funds had been considered as loans taken from 'insurance'.

Provident fund: Refundable advance/loans taken from a Provident Fund account, such as a Contributory Provident Fund, a General Provident Fund, a Public Provident Fund or any other provident fund in the public/private sector offices and companies, by the employees of the respective concerns, or account holders in case of a Public Provident Fund, were considered as 'Provident Fund'.

Financial corporations/institutions: Institutions such as Housing Development Finance Corporation Limited (HDFC), Housing and Urban Development Corporation Limited (HUDCO), etc., were considered under this category.

Other institutional agencies: Amount raised by the households from financial institutions other than those listed above was treated as loans from 'Other Institutional Agencies'.

Self-help group: A self-help group (SHG) is a financial intermediary usually composed of between 10-12 local persons. Members make small regular savings

contributions over a few month until there is enough capital in the group to begin lending. Funds are lent back to the members or at times to others. In India, many SHGs are linked to banks for the hand delivery of microcredit.

Money lender: Persons who lend money on interest had been considered as moneylenders.

Friends and relatives: Friends and relatives in this particular context are those who (i) are not the household members of the selected household and (ii) gifted money/material for construction/purchase of houses/flats or lent money free of interest. A friend or relative who charged interest for any loan advanced was regarded as money lender.

Other non-institutional agencies: Any non-institutional credit agency not covered above was considered under this category.

Principal source of drinking water: The different principal sources of drinking water considered for the survey are:

Bottled drinking water: Drinking water packaged in bottles, jars, pouches, and similar containers was classified as bottled drinking water. Generally this packaged drinking water meets certain safety standards and are considered safe for drinking. Tap water, well water, etc., kept by households in bottles, for convenience, was not treated as bottled drinking water.

Piped water into dwelling and piped water to yard/plot: If an arrangement was made by corporation, municipality, panchayat or other local authorities or any private or public housing estate or agency to supply water through pipe and if the sample household availed such facility for drinking, then such sources of drinking water was considered as piped water. Piped water into dwelling was defined as a piped water connection to one or more taps to the dwelling unit (e.g., in the kitchen). Piped water to yard/plot was defined as a piped water connection to a tap placed outside the dwelling unit of the household but in the yard or plot within the household premises.

Piped water from neighbour: If an arrangement was made by the sample household to avail drinking water from the piped water of the neighbour household supplied by corporation/municipality/panchayat or other local authorities or any private or public housing estate or agency, then the source of drinking water for the sample household was considered as 'piped water from neighbour'. If the sample household collected drinking water from more than one neighbour, then also source of drinking water for the sample household was considered as 'piped water from neighbour'.

Public tap/standpipe: Public tap or standpipe is a water point for community use in which water is supplied through pipe by corporation/municipality/panchayat or other local authorities or any private agency. Public tap/standpipe can have one or more taps and are typically made of brickwork, masonry or concrete.

Tube well and Hand pump: Tube well and hand pump are bore well used for extracting ground water for drinking purpose. If the pump of the bore well is

operated by animal, wind, electric, diesel or solar means etc., it is known as tube well and if the pump is operated manually by hand using human power and mechanical advantage to lift ground water, it is known as hand pump.

Protected well/unprotected well: A well is considered as protected if it has generally the following protective measures to lower the risk of contamination:

- a. A headwall around the well with a properly fitting cover
- b. A concrete drainage platform around the well with a drainage channel
- c. A hand pump or bucket with windlass

If instead of hand pump or bucket with windlass, electric pump was used to pump water from such wells, where the conditions (a) and (b) exist, it was considered as protected well. A well which was not protected by the above measures, e.g., the well not protected from runoff water or the well not protected from bird droppings and animals, was classified as unprotected well.

Tanker-truck: public/private: In ‘tanker-truck’, drinking water is trucked to a locality and supplied from tanker to the households of the locality. If the ‘tanker-truck’ was operated by any government agencies (central/state/local bodies etc.) and the sample household reported that it was their principal source of drinking water then the source of drinking water of the household was recorded as ‘public tanker-truck’. In case the ‘tanker-truck’ was operated by private agencies (NGOs, trusts etc.) and the sample household reported that it was their principal source of drinking water, then the source of drinking water of the household was considered as ‘private tanker-truck’.

Protected spring/unprotected spring: A spring was considered as protected, if it was protected from runoff, bird droppings and animals by a ‘spring box’, constructed of brick, masonry or concrete and built around the spring so that water flowed directly out of the box into a pipe or cistern, without being exposed to outside pollution. A spring which was not protected was called unprotected spring.

Rainwater collection: Rainwater refers to rain that is collected or harvested from surfaces (by roof or ground catchment) and stored in a container, tank or cistern until used. Traditionally, rainwater collection has been practised in arid and semi-arid areas to get drinking water of the household and water for other uses. When such water was used for drinking purpose, the source of drinking water was considered as rainwater collection.

Surface water: Surface water is water located above ground and includes rivers, dams, lakes, ponds, streams, canals and irrigation channels. For surface water, two distinct categories were provided, one for ‘tank/pond’ and another for ‘other surface water (river, dam, stream, canal, lake, etc.).

Others (cart with small tank or drum, etc.): In ‘cart with small tank or drum’, water is supplied in small tank or drum to a locality by donkey carts, motorized vehicles and other means.

The source of drinking water of same type located at two different places was not treated as two different sources of drinking water. Drinking water carried

through pipe from sources like tanker-truck, well, tank, river, etc., by the owner/occupants only for convenience of the household was not treated as piped water (i.e., piped water into dwelling or piped water to yard/plot). Instead, the actual source from which water was carried through pipe had been considered as the principal source of drinking water. When a household made arrangement for getting drinking water by hiring the services of persons, the source of water was considered as the one from which water was collected by the hired person.

Type of latrine used by the household: The different types of latrine considered for the survey are:

Flush/pour-flush: Flush latrine uses a cistern or holding tank for flushing water, and a water seal (which is a U-shaped pipe below the seat or squatting pan) that prevents the passage of flies and odours. A pour-flush latrine uses a water seal, but unlike a flush latrine, it uses water poured by hand for flushing (no cistern is used). Depending on the system/site where human excreta and waste water are disposed off, flush/pour-flush latrine can be of the following types: (i) piped sewer system, (ii) septic tank, (iii) twin leach pit, (iv) single pit, (v) elsewhere (open drain, open pit, open field, etc.).

Flush/pour-flush to piped sewer system: Piped sewer system is a system of sewer pipes, also called sewerage that is designed to collect human excreta and waste water and remove them from the household environment.

Flush/pour-flush to septic tank: Septic tank is an excreta collection device consisting of a watertight settling tank, which is normally located underground. The treated effluent of a septic tank usually seeps into the ground through a leaching pit.

Flush/pour-flush to twin leach pits/single pit: In twin pit flush/ pour-flush latrine, the excreta are carried into subsurface leach pits through pipes or covered drains and one pit is used at a time. The liquid infiltrates into the soil through the holes in the pit lining. The gases also disperse into the soil, and therefore, the provision of a vent pipe for its outlet is not necessary. When one pit is full, the excreta are diverted to the second pit. The filled pit can be conveniently emptied after a rest period of one and a half years, during which pathogens are inactivated and the organic matter decomposed. Thus the two pits can be used alternately and continuously. In a single pit system desludging is required immediately after the pit has filled up, and therefore involves handling of fresh and undigested excreta which is hazardous to health. Single leach pits are appropriate only if mechanical desludging vacuum tanker is readily available, or if the pit is abandoned when full.

Flush/pour-flush to elsewhere (open drain, open pit, open field, etc.): This type of latrine refers to the system of flush/pour-flush latrine where excreta are disposed of near the household environment (not into a pit, septic tank, or sewer). Excreta may be flushed to the open drain, open pit, open field, etc.

Ventilated improved pit latrine: This is a dry pit latrine ventilated by a pipe that extends above the latrine roof. The open end of the vent pipe is covered with gauze mesh or fly-proof netting and the inside of the super structure is kept dark.

Pit latrine with slab: This is a dry pit latrine that uses a hole in the ground to collect the excreta and a squatting slab or platform that is firmly supported on all sides, easy to clean and raised above the surrounding ground level to prevent surface water from entering the pit. The platform has a squatting hole, or is fitted with a seat. Unlike the ventilated improved pit latrine, in this type of latrine vent pipe is not used.

Pit latrine without slab/open pit: Pit latrine without slab uses a hole in the ground for excreta collection and does not have a squatting slab, platform or seat.

Composting latrine: This is a dry latrine into which carbon-rich material (vegetable wastes, straw, grass, sawdust, ash) are added to the excreta and special conditions maintained to produce inoffensive compost.

Others: Examples of such latrine are (i) hanging latrine which is built over the sea, a river, or other body of water, into which excreta drops directly, (ii) service latrine which are serviced by scavengers.

Chapter Three

Summary of Findings

In this report Result and findings obtained from the state sample data for 76th round during July – December 2018 for inquiry schedule 1.2 on “Drinking Water, Sanitation, Hygiene and Housing Condition” are presented. The survey was conducted in two sub-rounds of three months each during the period. Allocation of sample FSUs in 76 th round for Chhattisgarh State sample were total 180 out of that 114 samples for rural area and 66 samples were for urban area. Information was gathered about dwelling unit of the households like type of the dwelling unit (viz. independent house, flat etc.), tenorial status of dwelling unit (viz. owned, hired, no dwelling etc.), structure of the dwelling unit (viz. pucca, semi-pucca, katcha), condition of the structure (viz. good, satisfactory, bad), floor area of the dwelling unit, age of the house owned by the household, etc. along with the facilities available to the households in respect of drinking water, sanitation etc. and micro environment of surrounding the house like drainage system of the house, system of disposal of household waste water, system of disposal of household garbage etc from surveyed households.

3.1. Sample size: Allocation of sample FSUs in 76th round for Chhattisgarh State sample were total 180 out of that 114 samples for rural area and 66 samples were for urban area.

Table 3.1 Sample FSUs, and persons surveyed

FSU	Allotted	Surveyed	Person Surveyed
Rural	114	114	7010
Urban	66	64*	3081
Total	180	178	10091

*out of total allotted urban sample 2 FSUs were treated as causality

3.2 Indicators relating to household and population: This section presents comparison between all India and Chhattisgarh of estimates of some characteristics of households and population, household size, and sex ratio, The estimates of population presented in this Report are obtained on the basis of NSS 76th round Survey of Persons with Disabilities. Estimates of person presented in Statements /Tables in this Report includes transgender.

Table 3.2 Estimated number of households, persons(000), average households size(0.0) and sex ratio

Ref –table 3

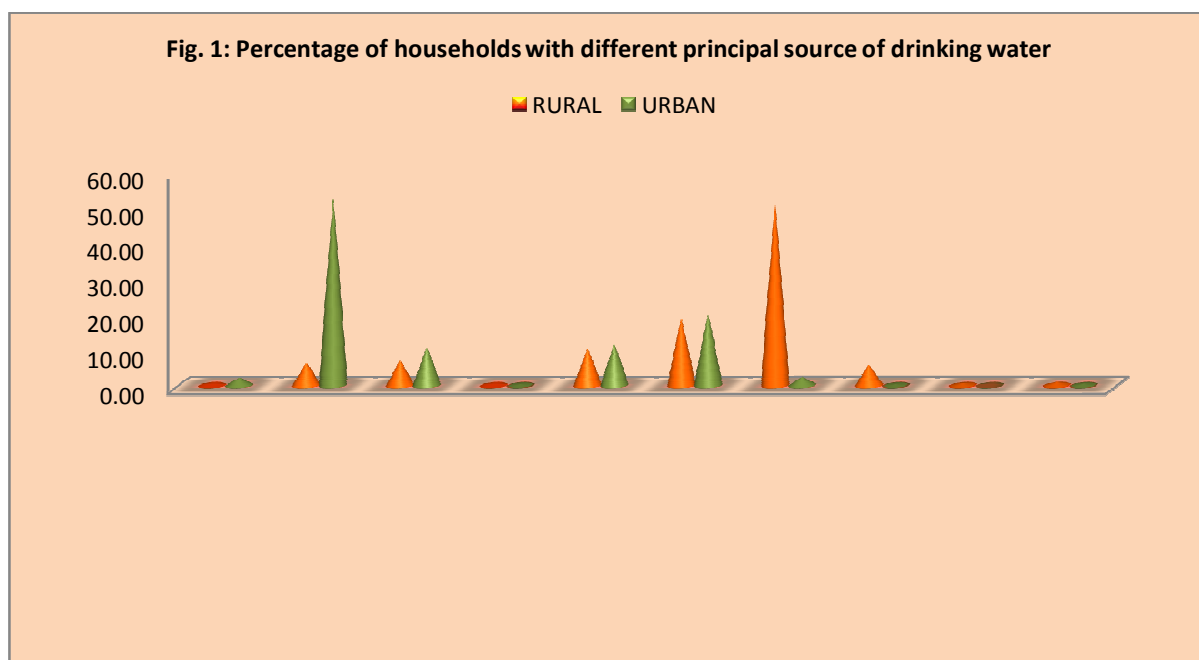

3.3 Drinking Water

3.3.1 Principal source of drinking water of the household: In this survey, the source of water from which the household obtained most of its drinking water during the last 365 days was considered as the principal source of drinking water of the household. The information on principal source of drinking water of the household was collected in terms of the seventeen categories viz. (i) bottled water, (ii) piped water into dwelling, (iii) piped water to yard/plot, (iv) piped water from neighbour, (v) public tap/standpipe, (vi) tube well, (vii) hand pump, (viii) protected well, (ix) unprotected well, (x) public tanker truck, (xi) private tanker truck, (xii) protected spring, (xiii) unprotected spring, (xiv) rainwater collection, (xv) tank/pond, (xvi) other surface water (river, dam, stream, canal, lake, etc.) and (xvii) others (cart with small tank or drum, etc.).

Table 3.3: Percentage distribution of households by principal source of drinking water of the household

Principal source of drinking water	RURAL	URBAN	ALL
Bottled water	0.00	2.20	0.50
Piped water into dwelling	6.30	52.40	16.50
Piped water to yard/plot	6.90	10.50	7.70
Piped water from neighbour	0.00	0.40	0.10
Public tap/stand pipe	10.10	11.40	10.40
Tube well	18.60	19.80	18.90
Hand pump	50.70	2.40	40.00
Well protected	5.70	0.40	4.50
Well unprotect	0.70	0.00	0.50
Public tanker truck	0.00	0.00	0.00
Private tanker truck	0.60	0.50	0.50
Protected/Unprotected spring	0.00	0.00	0.00
unprotect	0.00	0.00	0.00
Rainwater collection	0.00	0.00	0.00
Surface water: tank/pond	0.00	0.00	0.00
Surface water: other	0.40	0.00	0.30
Others	0.00	0.00	0.00
All	100.00	100.00	100.00

Ref –table 9

About 50.70 percent of the households in the rural areas used hand pump as the principal source of drinking water and about 52.40 percent of the households in the urban areas used piped water into dwelling as the principal source of drinking water.

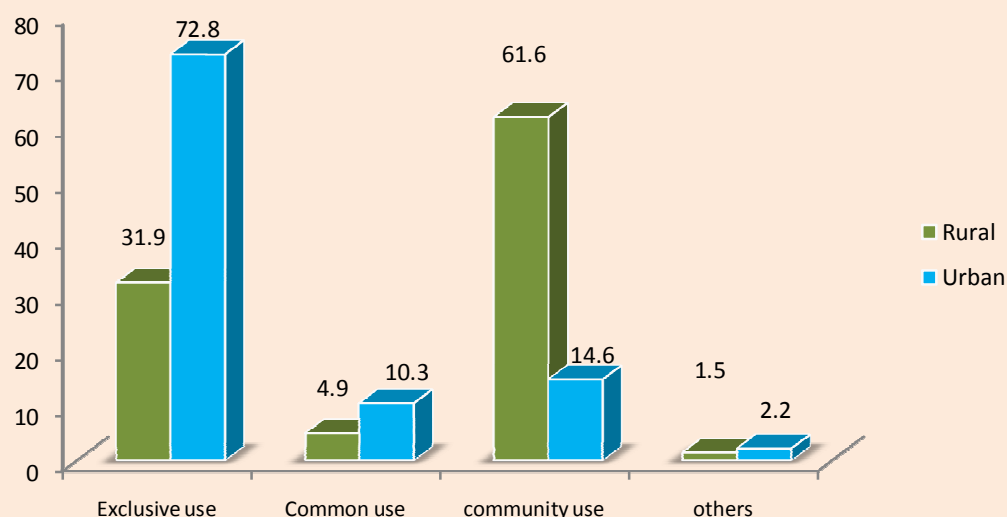

3.3.2 Access of household to principal source of drinking water: In this survey, access to the principal source of drinking water was defined in terms of the prevailing situation of use of the source of drinking water and not the legal right to use. About 31.9 percent of the households in the rural areas and about 72.8 percent of the households in the urban areas had exclusive access to principal source of drinking water. The table given below shows in detail

Table 3.4 : Percentage distribution of households by access to the principal source of drinking water of the household

Access to principal source of drinking water			Percentage distribution of households		
			Rural	Urban	All
Exclusive use of the household			31.9	72.8	41
Common use of households in the building			4.9	10.3	6.1
neighbour's source			1	0.6	1
community use	Public Source	Restricted	2.6	0	2
		Unrestricted	56.6	13.2	47
	Private Source	Restricted	1.4	0.8	1.3
		Unrestricted	0	0	0
others			1.5	2.2	1.6
All			100	100	100

Ref-table 11

Fig. 2: Percentage of households with different type of access to principal source of drinking water

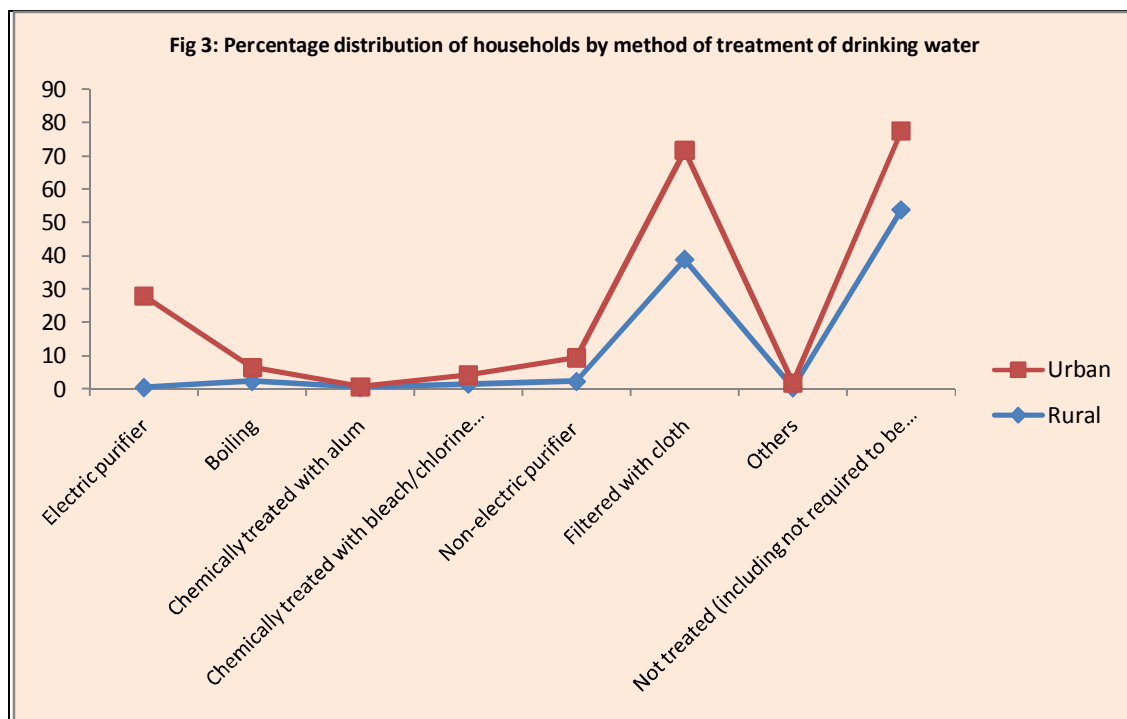

3.3.3 Method of treatment of drinking water by the household: In this survey, information on treatment of drinking water was collected considering the usual practice of the household to treat drinking water received from all the sources (either principal or supplementary or both) to improve its quality. The percentage distribution of households, at the all-India level, by method of treatment of drinking water is given below .

Table 3.5 : Percentage distribution of households by method of treatment of drinking water

Method of treatment of drinking water	Rural	Urban	All
Electric purifier	0.5	27.5	6.5
Boiling	2.3	4.3	2.7
Chemically treated with alum	0.5	0.3	0.5
Chemically treated with bleach/chlorine tablets	1.5	2.8	1.8
Non-electric purifier	2.3	7.1	3.3
Filtered with cloth	38.9	32.7	37.5
Others	0.4	1.5	0.6
Not treated (including not required to be treated)	53.7	23.7	47.1
ALL (EXCL NR)	100	100	100

Ref-table 15

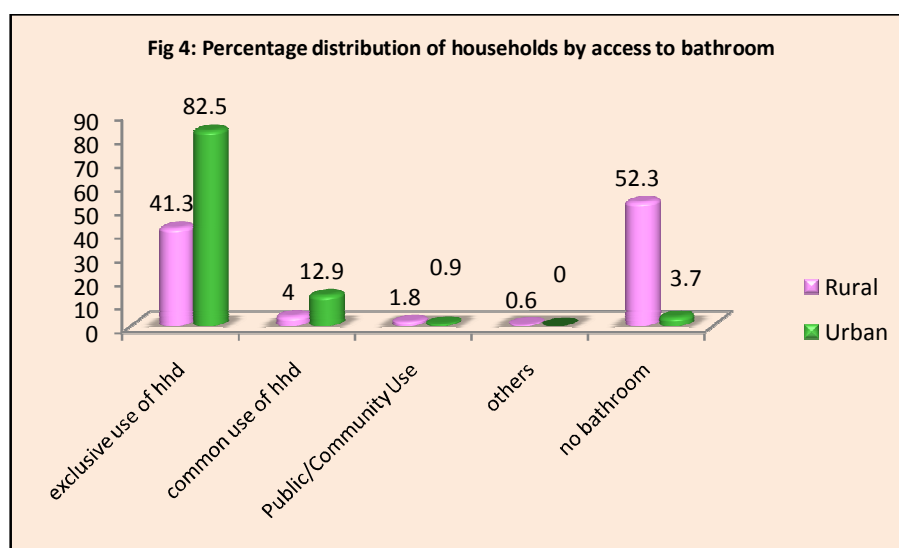

3.4 Bathroom

3.4.1 Access of household to bathroom: For the purposes of the survey, a bathing place which satisfied the criteria of a room was considered as a bathroom. It was considered that the household had access to bathroom if majority of the household members could use bathroom facility irrespective of whether it was used by them or not. Information on access to bathroom was collected in terms of six categories viz. (i) exclusive use of household, (ii) common use of households in the building, (iii) public/community use without payment, (iv) public/ community use with payment, (v) others and (vi) no bathroom. The percentage distribution of households, at the state level, by access to bathroom is given below in table 3.5.

Table 3.6 : Percentage distribution of households by access to bathroom

Access to bathroom		Percentage distribution of households		
		Rural	Urban	All
exclusive use of hhd		41.3	82.5	50.5
common use of hhd		4	12.9	6
Public/Community Use	without payment	1.8	0.9	1.6
	with payment	0	0	0
others		0.6	0	0.5
no bathroom		52.3	3.7	41.5
ALL		100	100	100

Ref-table 21.1

About 47.7 percent of the households in the rural areas and about 96.3 percent of the households in the urban areas had access to bathroom.

3.4.2 Type of bathroom used by the households: For this survey, it was considered that the household had used bathroom if it was generally used by majority of the household members. Information on type of bathroom used by the households which had access to bathroom was collected in terms of the four categories viz. (i) attached to the dwelling unit, (ii) detached to the dwelling unit but within the household premises, (iii) others and (vi) not used. The percentage distribution of households which had access to bathroom by type of bathroom used by them is given below.

Table 3.7 : Percentage distribution of households which had access to bathroom by type of bathroom used by them

Type of bathroom	Percentage distribution of households		
	Rural	Urban	All
Attached to the dwelling unit	30.8	73.9	46.5
Detached to the dwelling unit but within the household premises	62.3	25.2	48.8
Any other type of bathroom	6.7	0.9	4.6
Did not used bathroom	0.2	0.0	0.1
ALL	100.0	100.0	100.0

Ref-table 22

3.5 Latrine

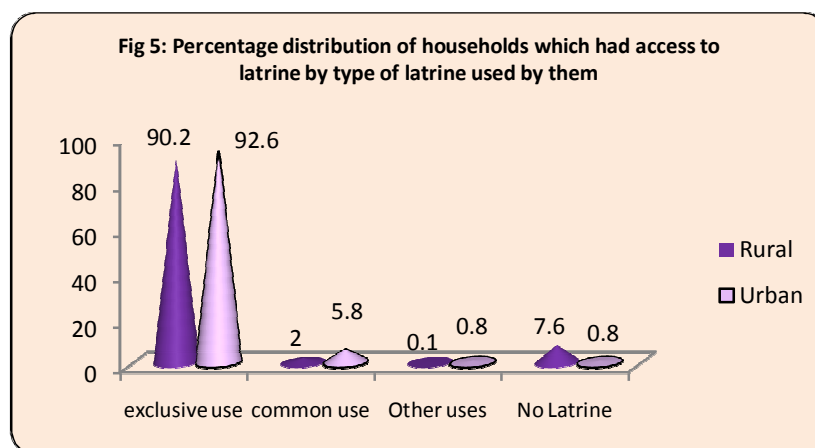

3.5.1 Access of household to latrine: For the purpose of this survey, it was considered that the household had access to latrine if majority of the household members had the facility of using latrine irrespective of whether it was used by them or not. Information on access of household to latrine is given in the following table.

Table 3.8 : Percentage distribution of households by access to latrine

Type of Latrine Used	Percentage of persons of the households having access		
	Rural	Urban	All
exclusive use of hhd	90.2	92.6	90.7
common use of hhd in buil.	2	5.8	2.9
pub./community lat. Without payment	0	0.4	0.1
pub./community lat. With payment	0	0.3	0.1
others	0.1	0.1	0.1
no latrine	7.6	0.8	6.1
ALL	100	100	100

Ref-table 24

In rural Chhattisgarh about 90.2 percent of the households and about 92.6 percent of the households in the urban areas of Chhattisgarh had access to latrine.

3.5.2 Type of latrine used by the households: For the households with access to latrine, information on type of latrine used by them was collected in this survey in terms of eleven categories viz. (i) flush/pour-flush to piped sewer system, (ii) flush/pour-flush to septic tank, (iii) flush/pour-flush to twin leach pit, (iv) flush/pour-flush to single pit, (v) flush/pour-flush to elsewhere (open drain, open pit, open field, etc.), (vi) ventilated improved pit latrine, (vii) pit latrine with slab, (viii) pit latrine without slab/open pit, (ix) composting latrine, (x) others and (xi) not used. It was considered that the household used latrine if latrine was generally used by majority of the household members. The percentage distribution of households having access to latrine by type of latrine used by them is given below

Table 3.9 : Percentage distribution of households having access to latrine by type of latrine used by them

Type of latrine used	Percentage distribution of households		
	Rural	Urban	All
Flush/pour-flush to piped sewer system	0.2	3.7	1
Flush/pour-flush to septic tank	34.5	70.8	43
Flush/pour-flush to twin leach pit	46.4	14.7	39.0
Flush/pour-flush to single pit	14.3	3.6	11.8
elsewhere	0	0	0
vent. Impro. pit	0	0	0
pit latrine with slab	2.7	1.4	2.4
pit latrine without slab	1	5.2	2
composting latrine	0	0.7	0.2
others	0	0	0
not used	0.9	0	0.7
ALL	100	100	100

Ref –table 25

3.5.3 Disposal of faeces of children of age below 3 years: For the purpose of the survey, information on disposal of faeces of children of age below 3 years was collected in terms of the categories (i) children used latrine, (ii) put/rinsed into latrine, (iii) put/rinsed into drain or ditch, (iv) thrown into garbage, (v) thrown or left in open area, (vi) buried, (vii) others and (viii) not applicable. For collecting this information, usual practice of the household for disposal of faeces of children of age below 3 years was considered. If the household did not have any children of age below 3 years, the category ‘not applicable’ was recorded. The percentage of households having children of age below 3 years and percentage distribution of those households by method of disposal of faeces of children of age below 3 years, are given as follows

Table 3.10 : Percentage of households having children of age below 3 years and percentage distribution of those households by method of disposal of faeces of children of age below 3 years

Description of item	Rural	Urban	All
1.Percentage of households having children of age below 3 years	13.8	8.5	12.6
2.Percentage distribution of households having children of age below 3 years by method of disposal of faeces of children of age below 3 years			
children used latrine	11.3	10.4	11.1
put/ rinse into latrine	30	50.4	33.1
put/rinse into drain/ditch thrown into garbage	7.8	5.7	7.5
thrown or left in open	23.4	28.2	24.1
buried	27	5.3	23.8
other	0.4	0	0.4
not applicable	0	0	0
ALL	100	100	100

Ref –table 29

3.6 Practice of Hand Washing

3.6.1 Practice of hand washing by household members: For the purpose of the survey, it was considered that the households followed the practice of hand washing if majority of the household members usually washed their hands. Information on practice of hand washing before meal and practice of hand washing after defecation was collected in this survey in terms of the four categories viz. (i) wash hands with water and soap/detergent, (ii) wash hands with water and distribution of households at the all-India level by practice of hand washing before meal and hand washing after defecation is given below in the table

Table 3.11 : Percentage distribution of households by practice of hand washing before meal

Practice of hand washing before meal	Rural	Urban	All
with water and soap/de.	30.5	69.5	39.2
with water and ash/mud sand etc.	4.6	0.6	3.7
with water only	64.2	29.9	56.6
no	0.6	0	0.5
all	100	100	100

Ref-table 31.1

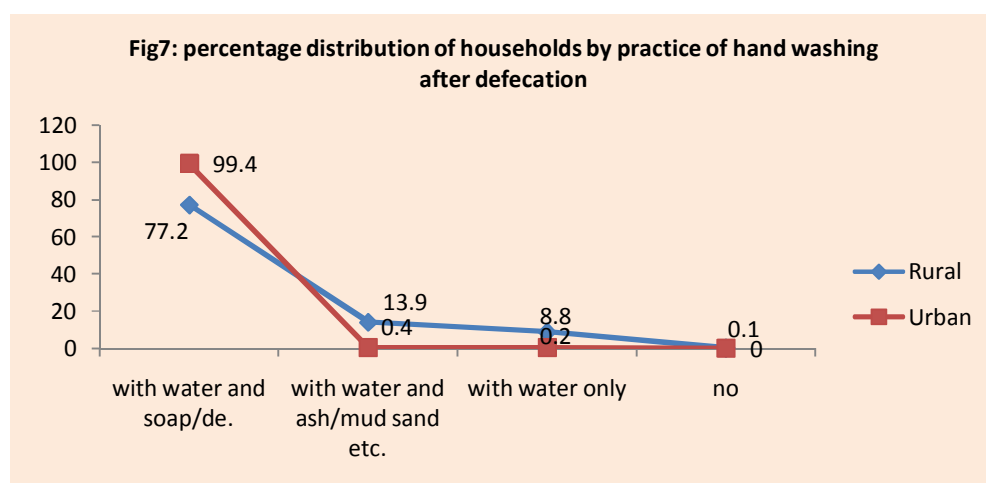

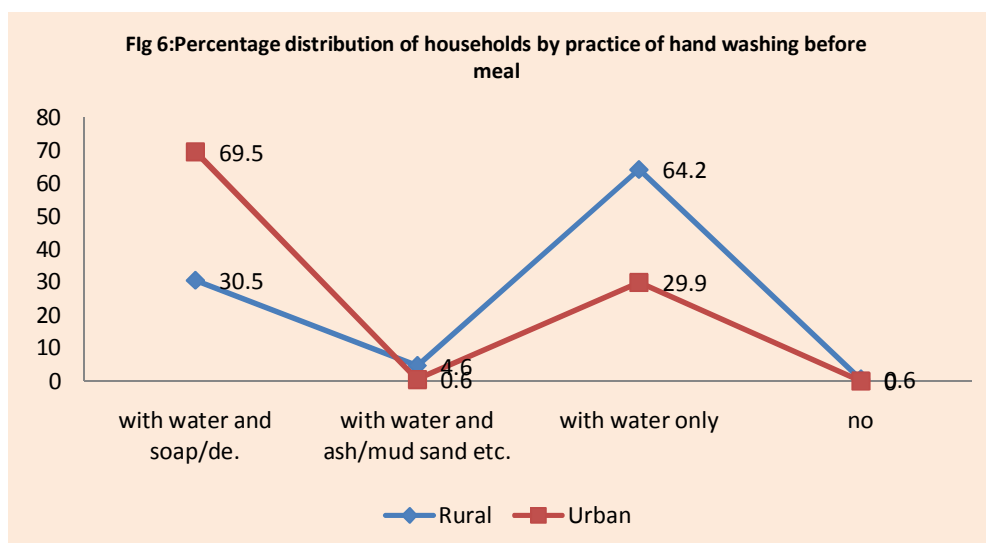

Percentage distribution of households by practice of hand washing before meal in rural areas with water and soap/detergent was about 30.5 percent and in urban areas it was 69.5 of Chhattisgarh

Table 3.12 : percentage distribution of households by practice of hand washing after defecation

2.Practice of hand washing after defecation	Rural	Urban	All
with water and soap/de.	77.2	99.4	82.1
with water and ash/mud sand etc.	13.9	0.4	10.9
with water only	8.8	0.2	6.9
no	0.1	0	0.1
all	100	100	100

Ref-table 31.2

Percentage distribution of households by practice of hand washing after defecation in rural areas with water and soap/detergent was about 77.2 percent and in urban areas it was 99.4 of Chhattisgarh

3.7 Tenorial status of dwelling unit

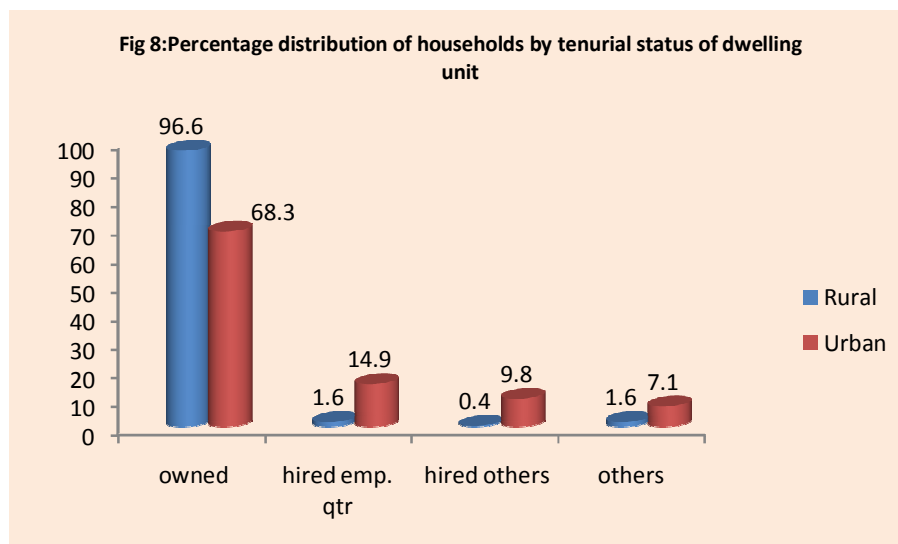

3.7.1 Tenorial status of dwelling unit: The tenorial status of the dwelling unit indicating the type of possession of the household. The percentage distribution of households by tenorial status of dwelling unit, at rural and urban level in Chhattisgarh are as follows

Table 3.13 Percentage distribution of households by tenorial status of dwelling unit

Tenorial status of dwelling unit	Rural	Urban	All
owned	96.6	68.3	90.3
hired emp. qtr	1.5	14.9	4.5
hired others	0.4	9.8	2.4
others	1.6	7.1	2.7
all	100	100	100

Ref –table 43.1

The percentage distribution of households by tenurial status of owned dwelling unit at rural and urban level were 96.6 and 68.3 respectively in Chhattisgarh

3.9 Use and Condition of structure of House

3.9.1 The percentage distributions of households living in houses by use of house are given in the term residential, residential cum commercial and residential cum others. Condition of the house refers to the physical condition of the structure of the house. The percentage distributions of households living in houses by use of house and condition of structure of house are given in following table

Table 3.14 Percentage distributions of households living in houses by use of house, condition of structure of house and number of floors of the house

Description of item	Percentage distribution of households		
	Rural	Urban	All
Use of house			
residential only	94.2	92.9	93.9
residential-cum-commercial	1.2	5.5	2.2
residential-cum-others	4.6	1.6	4
all (incl.n.r.)	100	100	100
Condition of structure of house			
good	40.8	58.8	44.8
satisfactory	51.7	37.7	48.6
bad	7.5	3.5	6.6
all (incl. n.r)	100	100	100

Ref-table 34

Among the households living in houses, about 94.2 percent of the households in the rural areas and about 92.9 percent of the households in the urban areas used the house for residential purpose only.

3.10 Benefits received by the households from Government Schemes for different facilities

3.10.1 In this survey, information on whether the household had ever received any benefit from government schemes for the facilities of drinking water, sanitation, housing, electrifications and LPG connection was collected. For those households which had ever received any benefit from government schemes, information was collected on whether they also received such benefit during last three years and if they received any benefit during last three years, information on the scheme from which the household got maximum benefit was collected. Percentage of households ever received any benefit from government schemes, percentage of households received any benefit from government schemes during last three years and percentage distribution of households by the scheme from which they had received maximum benefit during last three years are given below in table, for each of drinking water, sanitation, housing, and LPG connection facilities.

Table 3.15 Percentage of households ever received any benefit from government schemes, received any benefit from government schemes during the last three years, percentage distribution of households by the scheme from which they had received maximum benefit during last three years

<i>Drinking Water</i>			
Schemes	Rural	Urban	All
Schemes from which maximum benefit was received during last 3 years			
<i>National Rural Drinking Water Programme (NRDWP)</i>	72.2	0	52.7
<i>AMFRAU</i>	0	34.0	9.2
<i>Atal Mission for Rejuvenation and Urban Transformation (AMRUT)</i>	0	0	0
<i>Smart City Mission (SCM)</i>	22.4	42.1	27.7
<i>OTHER</i>	5.4	23.8	10.4
Ever received any benefit	7.8	12.7	8.9
Received any benefit during last 3 years	7.1	9.2	7.6

Ref –table 5.1

72.2 percent rural household benefitted with National Rural Drinking Water Programme (NRDWP) during last three years. 42.1 percent urban household received benefit in scheme Smart city mission.

Table 3.16 Percentage of households received any benefit from government schemes, received any benefit from government schemes during the last three years, percentage distribution of households by the scheme from which they had received maximum benefit during last three years

Sanitation Facility			
Schemes	Rural	Urban	All
Schemes from which maximum benefit was received during last 3 years			
Swachh Bharat Mission (SBM)	99.1	88.8	97.7

Ever received any benefit	42.6	17.5	37
Received any benefit during last 3 years	39.5	16.4	34.4

Ref–table 5.3

3.11 Type of structure: For this survey the type of accommodation availed of by the household in the place where it stayed last time for six month or more before coming to the present area will be recorded. Average floor area recorded total floor area including area of living rooms, other rooms, covered veranda, uncovered veranda of dwelling unit.

Table 3.18: Percentage distribution of households living in houses by type of structure and average floor area of structure for each type of structure

type of structure	Rural	Urban	All
pucca	62.2	95.2	69.5
semi-pucca	32.3	3.5	25.9
serviceable katcha	4.9	1.3	4.1
unserviceable katcha	0.6	0.1	0.5
all katcha	5.5	1.4	4.6
ALL	100	100	100
average floor area	64.81	67	65.3

Ref-table 32

Among the households living in houses, about 62.2 percent of the households in the rural areas and about 95.2 percent of the households in the urban areas had the house of pucca structure

3.12 Drainage system of the household, Disposal of household waste water and garbage: For the households living in houses, percentage distribution of households by type of drainage system of the household, by system of disposal of household waste water, by place of disposal of household garbage and by the agency made arrangement for collection of garbage of household are given below in Statement Table 3.19 Percentage distribution of households living in houses by system of disposal of household waste water

By system of disposal of household waste water				
Description of items		Rural	Urban	All
safe re- use after tretment		0.1	1.5	0.4
Disposed of without treatment to	drainage system	13.8	85.0	29.6
	open low land areas /streets	66.8	10.2	54.3
	ponds	0.5	0.6	0.5
	nearby river/nalla	6.0	2.0	5.1
disposed of with or without treatment to other place		12.6	0.6	10.0
not known		0.2	0.2	0.2
All		100	100	100
Percentage distribution of households living in houses by type of drainage system of the household				
underground		4.1	18.5	7.3
covered pucca		6.6	32.2	12.3
open pucca		17.6	42.3	23.1
open katcha		41.0	4.3	32.9
no drainage		30.6	2.7	24.4
all***		100.0	100.0	100.0

Ref-table 38

About 13.8 percent of the households in the rural areas and about 85.0 percent of the households in the urban areas had drainage system in the house for disposal of

waste water/liquid waste. Among the households living in houses, about 66.8 percent of the households in the rural areas disposed of household waste water without treatment to open low land areas/streets. 41.0 percent household in rural areas having open katcha and 42.0 percent household in urban areas having open pucca drainage system.

Table 3.20 Percentage distribution of households by type of agency made arrangement for collection of garbage of the household for each type of disposal of household garbage

Discription of items		Rural	Urban	All
.Percentage distribution of households living in houses by place of disposal of household garbage				
Disposed to	Bio-gas plant or manure pit dumping spot household	3.5	1.7	3.1
	Household's individual dumping spot	56.3	10.8	46.2
	Community dumping spot	3.3	65.3	17.1
	Common place other than community	31.1	18.4	28.3
	Other places	4.2	3.8	4.2
Not known to the household		1.5	0.0	1.2
All		100.0	100.0	100
Percentage distribution of households living in houses by agency made arrangement for collection of household garbage				
Panchayat/municipality/corporation		4.9	80.1	21.6
Resident/group of residents		1.8	4.2	2.3
Others		0.1	4.8	1.2
Not knownto the household		1.0	0.8	1.0
No agency for collection of household garbage		92.1	10.1	73.9
ALL		100	100	100

Ref –table 39

Among the households living in houses, about 92.1 percent of the households in the rural areas had no arrangement for collection of household garbage. In the urban areas, panchayat /municipality/ corporation made arrangement for collection of household garbage for about 80.1 percent of the households.

Appendix B

Sample Design and Estimation Procedure

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its 76th round during July 2018 - December 2018. The 76th round of NSS was earmarked for surveys on Drinking water, Sanitation, Hygiene, Housing conditions and survey of persons on disabilities.

2. Outline of survey programme

2.1 **Geographical coverage:** The survey covered the whole of Indian Union except the villages in Andaman and Nicobar Islands which were difficult to access.

2.2 **Period of survey and work programme:** The field work of the survey was carried out from 1st July, 2018 to 31st December 2018. There was no sub-round restriction in the sample design of this round. However, considering the operational convenience and workload in the field, it was felt that even though sub-round wise allocation was not done in sample design, sub-round assignment is useful for uniform spread of work in field. Hence distribution of sample units was made uniform over two quarters of the survey.

2.3 **Schedules of enquiry:** During this round, three schedules of enquiry were canvassed:

Schedule 0.0 :	list of households
Schedule 1.2 :	drinking water, sanitation, hygiene and housing condition
Schedule 26 :	survey of persons with disabilities

2.4 **Participation of States:** All the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. Following is the matching pattern of the participating States/ UTs.

State/UT	Extent of matching
Nagaland (U)	triple
Manipur, Telangana	double
Maharashtra (U)	one and half
Remaining States/ UTs	equal

3. Sample Design

3.1 Formation of sub-units (SUs):

3.1.1 **Rural areas:** In usual NSS rounds, large sample villages are divided into a number of sub-divisions called hamlet-groups based on population (approximate present population) of the villages during survey. This procedure was modified in this round. During this round, a rural village was notionally divided into a number of sub-units (SU) of more or less equal population during the preparation of frame. Census 2011 population of villages was projected by applying suitable growth rates and the number of SUs were formed in a village apriori.

3.1.2 The above procedure of SU formation was implemented in the villages with population *more than or equal to 1,000 as per Census 2011*. In the remaining villages, no SU was formed.

3.1.3 The number of SUs formed in the villages (with Census 2011 population 1,000 or more) of the frame was decided before selection of the samples following the criteria given below:

projected population of the village	no. of SUs formed
less than 1,200	1
1,200 to 2,399	2
2,400 to 3,599	3
3,600 to 4,799	4
4,800 to 5,999	5
.....and so on

3.1.4 Special case:

3.1.4.1 For rural areas of (i) Himachal Pradesh, (ii) Sikkim, (iii) Andaman & Nicobar Islands, (iv) Uttarakhand (except four districts Dehradun, Nainital, Hardwar and Udham Singh Nagar), (v) Punch, Rajouri, Udhampur, Reasi, Doda, Kishtwar, Ramban, Ladakh region (Leh and Kargil districts) of Jammu and Kashmir and (vi) Idukki district of Kerala, numbers of SUs formed in a village were determined in such a way that each SU contains 600 or less projected population. Further, SUs were not formed in the villages in the above mentioned districts/States with population less than 500 as per Census 2011. In the remaining villages, the number of SUs formed for these States/districts was as follows:

projected population of the village	no. of SUs formed
less than 600	1
600 to 1,199	2
1,200 to 1,799	3
1,800 to 2,399	4
2,400 to 2,999	5
.....and so on

3.1.4.2 For rural parts of Kerala, similar procedure as mentioned in para 3.1.3 above was adopted with the modification that the SUs were formed within Panchayat Wards instead of villages.

3.1.5 **Urban areas:** SUs were formed in urban sector also. The procedure was similar to that adopted in rural areas except that SUs were formed on the basis of households in the UFS frame. Each UFS block with number of households more than or equal to 200 was divided into a number of SUs. In the remaining UFS blocks, no SU was formed.

3.2 Outline of sample design: A stratified two stage design was adopted for the 76th round survey. *The first stage units (FSU) were villages/UFS blocks/sub-units (SUs) as per the situation.* The ultimate stage units (USU) were households in both the sectors.

3.3 Sampling Frame for First Stage Units:

3.3.1 There was no SU formation in uninhabited villages and villages (Panchayat wards for Kerala) with population less than 1,000 as per Census 2011 (less than 500 as per Census 2011 for the areas mentioned in para 3.1.4.1) and entire village was considered as one FSU. All such villages (Panchayat wards for Kerala) were the First Stage Units (FSUs).

3.3.2 In the remaining villages, notional sub-units (SUs) following the procedure as described in para 3.1.1 were formed. Such SUs were considered as First Stage Units (FSUs).

3.3.3 For the UFS blocks with less than 200 households, the entire UFS block was considered as one FSU. In the remaining UFS blocks, the SUs were considered as First Stage Units (FSUs).

3.3.4 List of FSUs as described above was the sampling frame for respective cases.

3.4 Stratification:

- (a) Each district was considered as a stratum. Within each district of a State/UT, generally speaking, two basic strata were formed: (i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, within the urban areas of a district, if there were one or more towns with

population one million or more as per Census 2011, each of them was considered as a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

- (b) A special stratum, in the rural areas only, was formed at State/UT level before district level strata were formed in each State/UT. This stratum comprised all the uninhabited villages of the State/UT as per Census 2011. However, this special stratum was formed if at least 50 such villages were available in a State/UT.

3.5 Sub-stratification:

3.5.1 Rural sector: Two groups of villages were formed within each stratum (except special stratum):

Group 1: all villages (Panchayat wards for Kerala) with Census 2011 population less than 1,000 (less than 500 for special cases mentioned in 3.1.4.1)

Group 2: remaining villages

In both the groups, number of sub-strata was formed in the following manner:

The sample size for a rural stratum was allocated among 2 groups in proportion to population. Let r_1 and r_2 be the allocations to Group 1 and Group 2 respectively. The villages within each group were first arranged in ascending order of population. Then ' $r_1/2$ ' and ' $r_2/2$ ' sub-strata were demarcated in Group 1 and Group 2 respectively in such a way that each sub-stratum comprised of a group of villages (all SUs of a village considered together) of the arranged frame and had more or less equal population. Sub-stratum numbers in Group 2 started from 11.

If number of villages in Group 1 was very small, no sub-stratum was formed.

3.5.2 Urban sector: Let ' u ' be the sample size allocated for an urban stratum. For all strata, if ' $u/2 > 1$ ', implying formation of 2 or more sub-strata, all the UFS blocks within the stratum were first arranged in ascending order of total number of households in the UFS blocks as per urban frame. Then sub-strata were demarcated in such a way that each sub-stratum comprised a group of UFS blocks (all SUs within the block taken together) having more or less equal number of households.

3.6 Total sample size (FSUs): 9,000 FSUs were allocated for the central sample at all-India level. For the state sample, 9,690 FSUs were allocated at the all-India level.

3.7 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2011 subject to a minimum sample allocation to each State/UT.

3.8 Allocation of State/ UT level sample to rural and urban sectors: State/UT level sample size was allocated between two sectors in proportion to population as per Census 2011 with 1.5 weightage to urban sector. A minimum of 4 FSUs, each for rural and urban sector separately, were allocated to each State/UT. For more urbanised big States like Maharashtra, Tamil Nadu etc., the urban allocation was limited to rural sample size to avoid undue weightage to urban sector.

3.9 Allocation to strata: Within each sector of a State/ UT, the respective sample size was allocated to the different strata in proportion to the population as per Census 2011. Stratum level allocation was adjusted to multiples of 2 with a minimum sample size of 2.

For special stratum formed at state level as mentioned in para 3.4(b), 2 FSUs were allocated.

3.10 Allocation to sub-strata:

3.10.1 Rural: Allocation was 2 for each sub-stratum.

3.10.2 Urban: Allocation was 2 for each sub-stratum for urban sector.

3.11 Selection of FSUs within a stratum/sub-stratum:

3.11.1 From all the sub-strata of Group 1 within each stratum of rural sector, required number of FSUs was selected by Probability Proportional to Size With Replacement (PPSWR) scheme with Census 2011 population as size.

3.11.2 From the remaining sub-strata of a rural stratum, and all sub-strata in urban sector within each stratum, required number of FSUs was selected by Simple Random Sampling With Replacement (SRSWR) scheme.

3.11.3 FSUs were selected by Simple Random Sampling With Replacement (SRSWR) scheme in the special stratum formed in rural sector at the State/UT level.

3.11.4 No sub-sample wise selection was done in this round and FSUs were selected in the form of single sample only.

3.12 Formation of sub-units and listing of households

3.12.1 Procedure of formation of SUs: After identification of the boundaries of the village/ UFS block which contains the sample FSU, the village/ UFS block was divided into the number of SUs (say, D) as given in the sample list by more or less equalising the present population of the village/UFS block in which the sample FSUs was located. It was ensured that SUs formed were clearly identifiable in terms of physical landmarks. For villages/blocks where the number of SUs to be formed was 1 as per the sample list, no SU was formed.

3.12.2 Listing of households: All the households of the sample FSU were listed. Temporarily locked households were also listed after ascertaining the temporariness of locking of households through local enquiry.

3.13 Formation of second stage strata (SSS) and allocation of households in different SSS:

3.13.2A cut-off point 'A' was determined from household's usual monthly consumer expenditure collected in Schedule 21.1: Domestic Tourism Expenditure of NSS 72nd round (July 2014 - June 2015) data (with proper adjustments using price indices) for each NSS region for both rural and urban areas separately, in such a way that top 10% of the population had MPCE more than or equal to 'A'.

3.13.3 Composition of the SSS and number of households surveyed from different SSS for both rural and urban sectors was as follows:

SSS	composition of SSS	number of households allocated
SSS 1:	households having $MPCE \geq A$	2
SSS 2:	remaining households	10
Total		12

3.14 Selection of households: The sample households from each SSS were selected by SRSWOR.

4. Estimation Procedure

4.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

i = subscript for i-th FSU [SU/ village (panchayat ward)/ block]

j = subscript for j-th second stage stratum in an FSU

k = subscript for k-th sample household within an FSU

N = total number of FSUs in any rural/urban sub-stratum

Z = total size of villages in a rural sub-stratum (where villages are selected as FSUs i.e. sub-stratum numbers 01 - 10)

z = size of sample FSU used for selection in sub-stratum numbers 01 - 10

n = number of sample FSUs surveyed including 'uninhabited' and 'zero cases' but excluding casualty for a particular sub-stratum

H = total number of households listed in a second-stage stratum of an FSU

h = number of households surveyed in a second-stage stratum of an FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

y_{stijk} = observed value of the characteristic y for the k-th household of the j-th second stage stratum of the i-th FSU for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

4.2 Formulae for Estimation of Aggregates for a stratum \times sub-stratum:

4.2.1 Schedules 1.2:

4.2.1.1 Rural:

4.2.1.1.1 Case 1: Sub-strata of special Stratum (i.e. stratum = 99 and sub-stratum = 01)

(i) For j-th second-stage:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{ij}}{h_{ij}} \sum_{k=1}^{h_{ij}} y_{ijk} \right]$$

4.2.1.1.2 Case 2: Sub-strata of Group 1 villages (Sub-stratum Number: 01, 02, ,10)

(i) For j-th second-stage stratum of a stratum \times sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{ij}}{h_{ij}} \sum_{k=1}^{h_{ij}} y_{ijk} \right]$$

4.2.1.1.3 Case 3: Sub-strata of Group 2 villages (Sub-stratum Number: 11 onwards)

(i) For j-th second-stage stratum of a stratum \times sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{ij}}{h_{ij}} \sum_{k=1}^{h_{ij}} y_{ijk} \right]$$

4.2.1.1.3 For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

4.2.1.2 Urban:

4.2.1.2.1 (i) For j-th second-stage stratum of a stratum \times sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{ij}}{h_{ij}} \sum_{k=1}^{h_{ij}} y_{ijk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

4.3 Overall Estimate for Aggregates for a stratum:

Overall estimate for a stratum (\hat{Y}_s) was obtained as

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

4.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level was obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

4.5 Estimates of Ratios:

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) was obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

4.6 Estimates of Error: The estimated variances of the above estimates are as follows:

4.6.1 For aggregate \hat{Y} :

$$V\hat{ar}(\hat{Y}) = \sum_s V\hat{ar}(\hat{Y}_s) = \sum_s \sum_t V\hat{ar}(\hat{Y}_{st})$$

Rural

(a) Sub-strata of special stratum (i.e. stratum = 99 and sub-stratum = 01):

$$V\hat{ar}(\hat{Y}_{st}) = V\hat{ar}_{srswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} (N_{st} \hat{Y}_{sti} - \hat{Y}_{st})^2 \right]$$

$$\text{where } N_{st} \hat{Y}_{sti} = \sum_j \sum_k y_{stijk} \times n_{st} \times \text{multiplier} \dots\dots\dots(i)$$

(b) Sub-strata of Group 1 villages (Sub-stratum Number: 01, 02,, 10):

$$V\hat{ar}(\hat{Y}_{st}) = V\hat{ar}_{ppswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{st} \hat{Y}_{sti}}{z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

$$\text{where } \frac{Z_{st}}{z_{sti}} \hat{Y}_{sti} = \sum_j \sum_k y_{stijk} \times n_{st} \times \text{multiplier} \dots\dots\dots(ii)$$

(c) Sub-strata of Group 2 villages (Sub-stratum Number: 11 onwards):

$$V\hat{a}r(\hat{Y}_{st}) = V\hat{a}r_{srswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} (N_{st} \hat{Y}_{sti} - \hat{Y}_{st})^2 \right]$$

where $N_{st} \hat{Y}_{sti}$ is same as given in 4.6.1 a(i)

Urban:

$$V\hat{a}r(\hat{Y}_{st}) = V\hat{a}r_{srswr}(\hat{Y}_{st}) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} (N_{st} \hat{Y}_{sti} - \hat{Y}_{st})^2 \right]$$

where $N_{st} \hat{Y}_{sti}$ is same as given in 4.6.1 a(i)

4.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{\hat{X}^2} \sum_s \left[\sum_t M_{st} + \sum_{t'} M_{st'} \right]$$

where t, t' indicate respectively the sub-strata with PPSWR and SRSWR selection at first stage.

Rural:**(a) Sub-strata of special stratum (i.e. stratum = 99 and sub-stratum = 01):**

$$M_{st'} = \frac{1}{n_{st'}(n_{st'}-1)} \sum_{i=1}^{n_{st'}} \left[N_{st'} (\hat{Y}_{st'i} - \hat{R} \hat{X}_{st'i}) - (\hat{Y}_{st'} - \hat{R} \hat{X}_{st'}) \right]^2$$

where

$$N_{st'} \hat{Y}_{st'i} = \sum_j \sum_k y_{st'ijk} \times n_{st'} \times multiplier \dots\dots\dots(iii)$$

$$\text{and } N_{st'} \hat{X}_{st'i} = \sum_j \sum_k x_{st'ijk} \times n_{st'} \times multiplier \dots\dots\dots(iv)$$

(b) Sub-strata of Group 1 villages (Sub-stratum Number: 01, 02, ..., 10):

$$M_{st} = \frac{1}{n_{st}(n_{st} - 1)} \sum_{i=1}^{n_{st}} \left[\frac{Z_{st}}{z_{sti}} (\hat{Y}_{sti} - \hat{R}\hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R}\hat{X}_{st}) \right]^2$$

where

$$\frac{Z_{st}}{z_{sti}} \hat{Y}_{sti} = \sum_j \sum_k y_{stijk} \times n_{st} \times multiplier \quad \text{and}$$

$$\frac{Z_{st}}{z_{sti}} \hat{X}_{sti} = \sum_j \sum_k x_{stijk} \times n_{st} \times multiplier$$

(c) Sub-strata of Group 2 villages (Sub-stratum Number: 11 onwards):

$$M_{st'} = \frac{1}{n_{st'}(n_{st'} - 1)} \sum_{i=1}^{n_{st'}} \left[N_{st'} (\hat{Y}_{st'i} - \hat{R}\hat{X}_{st'i}) - (\hat{Y}_{st'} - \hat{R}\hat{X}_{st'}) \right]^2$$

Where

$N_{st'} \hat{Y}_{st'i}$ and $N_{st'} \hat{X}_{st'i}$ are same as given in 4.6.2 a(iii) and 4.6.2 a(iv) respectively.

Urban:

$$M_{st'} = \frac{1}{n_{st'}(n_{st'} - 1)} \sum_{i=1}^{n_{st'}} \left[N_{st'} (\hat{Y}_{st'i} - \hat{R}\hat{X}_{st'i}) - (\hat{Y}_{st'} - \hat{R}\hat{X}_{st'}) \right]^2$$

Where

$N_{st'} \hat{Y}_{st'i}$ and $N_{st'} \hat{X}_{st'i}$ are same as given in 4.6.2 a(iii) and 4.6.2 a(iv) respectively.

4.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{Var(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

5. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a schedule type are given below:

sch type	sector	multipliers
1.2	rural (sub-strata of special stratum i.e. stratum = 99)	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
	rural (sub-stratum number: 01, 02, ..., 10)	$\frac{Z_{st}}{n_{stj}} \times \frac{1}{z_{sti}} \times \frac{H_{stij}}{h_{stij}}$
	rural (sub-stratum number: 11 onwards)	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
	urban	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
	j = 1, 2 for Schedule 1.2 and j = 1, 2, 3, 4, 5, 6, 7 for Schedule 26	

For estimating any characteristic for any domain not specifically considered in sample design, indicator variable was used. Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

GOVERNMENT OF INDIA
NATIONAL SAMPLE SURVEY OFFICE
SOCIO-ECONOMIC SURVEY
SEVENTY-SIXTH ROUND: JULY 2018 – DECEMBER 2018
SCHEDULE 1.2: DRINKING WATER, SANITATION, HYGIENE
and HOUSING CONDITION

[0] descriptive identification of sample household			
1. state/u.t.:		5. investigator unit number /block number:	
2. district:		6. sample sub-unit (SU) number	
3. sub-district/tehsil/town:*		7. name of head of household:	
4. village name:		8. name of informant:	

[1] identification of sample household								
item no.	item	code				item no.	item	code
1.	ssl. no. of sample FSU					6.	serial number of informant (as in column 1 of block 3)	
2.	round number	7	6			7.	response code	
3.	schedule number	1	2	0		8.	survey code	
4.	second-stage stratum number (1/2)					9.	reason for substitution of original household (code)	
5.	sample household number							

Codes for Block 1

item 7: **response code:** informant: *co-operative and capable* - 1, *co-operative but not capable* - 2, *busy* - 3, *reluctant* - 4, *others* - 9.

item 8: **survey code:** household surveyed: *original* - 1, *substitute* - 2; *casualty* - 3.

item 9: **reason for substitution of original household:**

informant busy - 1, *members away from home* - 2, *informant non-cooperative* - 3, *others* - 9.

* tick mark (✓) may be put in the appropriate place.

[3] Demographic and other particulars of household members

[illegible]

Note: col. 11 to col. 14 will be filled in after canvassing block 5.

Codes for Block 3

col. 3: **relation to head:** self - 1, spouse of head - 2, married child - 3, spouse of married child - 4, unmarried child - 5, grandchild - 6, father/ mother/ father-in-law/ mother-in-law - 7, brother/ sister/ brother-in-law/ sister-in-law/ other relatives - 8, servant/ employees/ other non-relatives - 9.

col. 4: **gender:** male - 1, female - 2, transgender - 3.

col. 6: **marital status:** never married - 1, currently married - 2, widowed - 3, divorced/ separated - 4.

col. 7: **highest level of education:** not literate - 01, literate without any schooling - 02, literate without formal schooling: through NFEC - 03, through TLC/ AEC - 04, others - 05; literate with formal schooling: below primary - 06, primary - 07, upper primary/ middle - 08, secondary - 10, higher secondary - 11, diploma / certificate course (upto secondary) - 12, diploma/ certificate course (higher secondary) - 13, diploma/ certificate course (graduation & above) - 14, graduate - 15, post graduate and above - 16.

col. 8: **usual principal activity status:**

worked in household enterprise (self-employed): own account worker - 11, employer - 12, worked as helper in household enterprise (unpaid family worker) - 21; worked as regular salaried/ wage employee - 31; worked as casual wage labour: in public works - 41, in other types of work - 51; did not work but was seeking and/ or available for work - 81, attended educational institution - 91, attended domestic duties only - 92, attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use - 93, rentiers, pensioners, remittance recipients, etc. - 94, not able to work due to disability - 95, others (including begging, prostitution, etc.) - 97.

col. 9: **industry:** 2-digit code as per NIC - 2008.

col. 10: **occupation:** 2-digit code as per NCO - 2004.

col. 11: **use of latrine:** regularly - 1, occasionally - 2, never - 3.

col. 12: **type of latrine used:** flush/pour-flush to: piped sewer system - 01, septic tank - 02, twin leach pit - 03, single pit - 04, elsewhere (open drain, open pit, open field, etc) - 05; ventilated improved pit latrine - 06, pit latrine with slab - 07, pit latrine without slab/ open pit - 08, composting latrine - 10, others - 19.

col. 14: **reason for not using latrine:** latrine has no superstructure - 1, latrine is not clean/ sufficient water is not available in the latrine - 2, malfunctioning of the latrine - 3, shortage of latrine - 4, latrine is used for other purposes - 5, lack of privacy/ safety - 6, personal preference - 7, cannot afford charges for paid latrine - 8, others - 9.

[4] household characteristics										
1.	household size		<i>amount spent by the household on construction/first-hand purchase of houses/ flats for residential purpose and sources of finance</i>							
2.	religion (code)		12.	whether spent any amount during last 365 days ? (yes-1, no-2)						
3.	social group (code)		13.	for 1 in item 12			amount spent (Rs.)			
4.	land possessed as on the date of survey (code)		14.				sources of finance (codes)			
<i>household's usual monthly consumer expenditure (Rs.)</i>							(four different sources in descending order of amount financed)			
5.	usual consumer expenditure in a month for household purposes out of purchase (A)									
6.	imputed value of usual consumption in a month from home grown stock (B)		<i>benefit received by the household from government schemes for drinking water, sanitation, housing, electrification, LPG connection facilities</i>							
7.	imputed value of usual consumption in a month from wages in kind, free collection, gifts, etc. (C)			facility	whether ever received any benefit? (yes - 1, no - 2, not known - 3)	if ever received any benefit, whether received benefit during last 3 years (yes - 1, no - 2, not known - 3)	if received any benefit during last 3 years, scheme from which maximum benefit was received (code)			
8.	expenditure on purchase of household durables during last 365 days (D)									
9.	usual monthly consumer expenditure [A + B + C + (D/12)]		15.1	drinking water						
			15.2	sanitation						
			15.3	housing						
			15.4	electrification						
			15.5	LPG connection						
10.	tenurial status of dwelling (code)		<i>maximum distance normally travelled to the place of work:</i>							
11.	for 1 to 5 or 9 in item 10 , area type in which the dwelling unit is located (code)		16.1	among the male earners (code)						
			16.2	among the female earners (code)						
			16.3	among the transgender earners (code)						

Codes for Block 4

item 2: **religion:** Hinduism - 1, Islam - 2, Christianity - 3, Sikhism - 4, Jainism - 5, Buddhism - 6, Zoroastrianism - 7, others - 9.

item 3: **social group:** scheduled tribe (ST) - 1, scheduled caste (SC) - 2, other backward class (OBC) - 3, others - 9.

item 4: **land possessed:**

area in hectare	code	area in hectare	code
less than 0.005	01	2.01 – 3.01	07
0.005 - 0.02	02	3.01 - 4.01	08
0.02 - 0.21	03	4.01 - 6.01	10
0.21 - 0.41	04	6.01 - 8.01	11
0.41 - 1.01	05		
1.01 – 2.01	06	greater than or equal to 8.01	12
Note 1: 1 acre = 0.4047 hectare, 1 hectare = 10,000 square metre.			
Note 2: Entry will be '99' if the sample household does not possess any land.			

item 10: **tenurial status of dwelling:** owned: freehold - 1, leasehold - 2; hired: employer quarter -3, hired dwelling unit with written contract -4, hired dwelling unit without written contract -5; others -9, no dwelling -6.

item 11: **area type of dwelling unit:** notified slum - 1, non-notified slum - 2, squatter settlement - 3, other areas -9.

item 14: **sources of finance:**

own source (including own labour)	01		
institutional agencies		non-institutional agencies	
government.....	02	self help group.....	08
bank	03	money lender.....	09
insurance.....	04	friends and relatives.....	10
provident fund (advance/ loan).....	05	other non-institutional agencies	11
financial corporation/institution.....	06		
other institutional agencies.....	07		

item 15.1: **schemes for drinking water:** National Rural Drinking Water Programme (NRDWP) -1, Atal Mission for Rejuvenation and Urban Transformation (AMRUT) -2, Smart Cities Mission -3, other scheme -9, not known -5.

item 15.2: **schemes for sanitation:** Swachh Bharat Mission (SBM) -1, Atal Mission for Rejuvenation and Urban Transformation (AMRUT) - 2, Smart Cities Mission - 3, other scheme - 9, not known - 5.

item 15.3: **schemes for housing:** Pradhan Mantri Awaas Yojana (PMAY) -1, other scheme - 9, not known - 5.

item 15.4: **schemes for electrification:** Deendayal Upadhyaya Gram Jyoti Yojana (DDUGJY) -1, other scheme -9, not known - 5.

item 15.5: **schemes for LPG connection:** Pradhan Mantri Ujjwala Yojana (PMUY) - 1, other scheme - 9, not known - 5.

item 16.1-16.3: **distance:** not required to travel - 1; travelled a distance of: less than 1 k.m. - 2, 1 to 5 k.m. - 3, 5 to 10 k.m. - 4, 10 to 15 k.m. - 5, 15 to 30 k.m. - 6, 30 k.m. or more - 7.

[5] particulars of living facilities: drinking water, bathroom, sanitation, etc.							
srl. no.	item						code/entry
(1)	(2)						(3)
A. drinking water							
1.	principal source of drinking water (bottled water - 01, piped water into dwelling - 02, piped water to yard/plot - 03, piped water from neighbour - 04, public tap/standpipe - 05, tube well - 06, hand pump - 07, well: protected - 08, unprotected - 09; tanker-truck: public - 10, private - 11; spring: protected - 12, unprotected - 13; rainwater collection - 14, surface water: tank/pond - 15, other surface water (river, dam, stream, canal, lake, etc.) - 16; others (cart with small tank or drum, etc.) - 19)						
2.	whether availability of drinking water from the principal source is sufficient throughout the year? (yes - 1, no - 2)						
3.	for 2 in item 2, during which calendar months of the year availability of drinking water was not sufficient? (record '1' against the applicable month(s) and rest of the months to be left blank)	Jan	Feb	Mar	Apr	May	Jun
		Jul	Aug	Sep	Oct	Nov	Dec
4.	access to the principal source of drinking water (exclusive use of household - 1, common use of households in the building - 2, neighbour's source - 3, community use: public source restricted to particular community - 4, public source unrestricted - 5, private source restricted to particular community - 6, private source unrestricted - 7; others - 9)						
5.	distance to the principal source of drinking water (within dwelling - 1, outside dwelling but within the premises - 2, outside premises: less than 0.2 k.m. - 3, 0.2 to 0.5 k.m. - 4, 0.5 to 1.0 k.m. - 5, 1.0 to 1.5 k.m. - 6, 1.5 k.m. or more - 7)						
6.	who fetches drinking water from principal source? (male members of the household of age: below 18 years - 1, 18 years or more - 2; female members of the household of age: below 18 years - 3, 18 years or more - 4; hired labour - 5, others - 9)						
7.	for 3 to 7 in item 5	time taken for a single trip to reach the principal source of drinking water, obtain water and back to household (in minutes) [no decimal point]					
8.		waiting time at the principal source of drinking water in a single trip (in minutes) [no decimal point]					
9.		number of trips required in a day for fetching drinking water from principal source					
10.	for 02 to 14 in item 1, is there stagnant water around the source of drinking water? (yes - 1, no - 2)						
11.	supplementary source of drinking water (code structure same as item 1: principal source of drinking water)						
12.	method of treatment of drinking water by the household (treated: electric purifier - 1, boiling - 2, chemically treated with alum - 3, chemically treated with bleach/chlorine tablets - 4, non-electric purifier - 5, filtered with cloth - 6, others - 9; not treated - 7)						
13.	material of the main container in which drinking water is stored (non-metal: earthen - 1, plastic - 2, other non-metal - 3; metal: iron - 4, copper - 5, stainless steel - 6, brass - 7, other metal - 8; no storage - 9)						

continued to next page

[5] particulars of living facilities: drinking water, bathroom, sanitation, etc.			
srl. no.	item		code/entry
(1)	(2)		(3)
14.	for 1 to 8 in item 13	how long drinking water is stored in the main container? <i>(less than 1 day - 1, 1 day or more but less than 3 days - 2, 3 days or more - 3)</i>	
15.		whether drinking water stored in the main container is covered? <i>(yes - 1, no - 2)</i>	
16.		how drinking water is taken out from the main container? <i>(through tap - 1, vessel with handle dipped in to take out water - 2, vessel without handle dipped in to take out water - 3, poured out - 4)</i>	
B. water for all household activities			
17.	principal source of water for all household activities excluding drinking (viz., cooking, washing, bathing, etc.) (code structure same as item 1: principal source of drinking water)		
18.	whether the household gets sufficient water throughout the year for all household activities (viz., drinking, cooking, washing, bathing, etc.)? <i>(yes - 1, no - 2)</i>		
19.	for 02 to 05, 10 and 11 in either item 1, 11 or 17 , frequency of supply of water <i>(daily - 1, once in two days - 2, once in three days - 3, once in a week - 4, others - 9)</i>		
20.	for 02 and 03 in either item 1, 11 or 17 , whether water is metered ? <i>(yes - 1, no - 2)</i>		
21.	amount paid (payable) per month for purchase of water/ to the delivery agency, organisation, office etc. for water charges	21.1 whether any amount is usually paid in a month? <i>(yes: information on full amount of payment is available - 1, information on some amount of payment is available - 2, no information on amount paid is separately available - 3; not required to pay - 4)</i>	
		21.2 for 1 and 2 in item 21.1 , average amount paid per month (Rs.)	
C. bathroom			
22.	access of the household to bathroom <i>(exclusive use of household - 1, common use of households in the building - 2, public/ community use without payment - 3, public/ community use with payment - 4, others - 9, no bathroom - 5)</i>		
23.	for 1 to 4 and 9 in item 22 , type of bathroom used by the household <i>(used: attached to the dwelling unit - 1, detached to the dwelling unit but within the household premises - 2, others - 9; not used - 3)</i>		
24.	distance from the bathing place <i>(within dwelling - 1, outside dwelling but within the premises - 2, outside premises: less than 0.2 k.m. - 3, 0.2 to 0.5 k.m. - 4, 0.5 to 1.0 k.m. - 5, 1.0 k.m. to 1.5 k.m. - 6, 1.5 k.m. or more - 7)</i>		
D. latrine			
25.	access of the household to latrine <i>(exclusive use of household - 1, common use of households in the building - 2, public/ community latrine without payment - 3, public/ community latrine with payment - 4, others - 9, no latrine - 5)</i>		
26.	for 1 to 4 and 9 in item 25 , type of latrine used by the household <i>(used: flush/pour-flush to: piped sewer system - 01, septic tank - 02, twin leach pit - 03, single pit - 04, elsewhere (open drain, open pit, open field, etc) - 05; ventilated improved pit latrine - 06, pit latrine with slab - 07, pit latrine without slab/ open pit - 08, composting latrine - 10, others - 19; not used - 11)</i>		

[5] particulars of living facilities: drinking water, bathroom, sanitation, etc.		
srl. no.	item	code/entry
(1)	(2)	(3)
27.	whether bathroom and latrine both are within the household premises? <i>(yes - 1, no - 2)</i>	
28.	for 1 in item 25 and 02 to 04, 06, 07 and 10 in item 26 , whether excreta from septic tank/pit/composting latrine have ever been emptied? <i>(yes- 1, no - 2, not known - 3)</i>	
29.	who emptied the excreta last time? <i>(panchayat/ municipality / corporation - 1, private agency - 2, hired labour engaged by the household - 3, member(s) of the household - 4, others - 9, not known - 5)</i>	
30.	for 1 in item 28 place of disposal of excreta last time <i>(treatment plant - 1, buried in covered twin leach pit/ single pit - 2, uncovered pit/ open land/ pond/ river etc. - 3, other places - 9, not known - 4)</i>	
31.	amount paid (payable) for emptying the excreta last time (Rs.)	
32.	how frequently excreta is emptied? <i>(once or more in a year - 1, once in 2 years - 2, once in 5 years - 3, once in 10 years - 4, others - 9, not known - 5)</i>	
33.	disposal of faeces for children of age below 3 years <i>(children used latrine -1, put/ rinsed into latrine - 2, put/ rinsed into drain or ditch - 3, thrown into garbage -4, thrown or left in open area -5, buried - 6, others - 9, not applicable -7)</i>	
34.	for 01 to 08, 10, 19 in item 26 , availability of water in or around the latrine used <i>(water is available with soap/ detergent - 1, water is available with ash/ mud/ sand etc. - 2, only water is available - 3; not available - 4)</i>	
E. practice of hand washing		
35.	whether household members regularly wash their hands before meal? <i>(yes: with water and soap/ detergent - 1, with water and ash/ mud/ sand etc.- 2, with water only - 3; no - 4)</i>	
36.	whether household members regularly wash their hands after defecation? <i>(yes: with water and soap/ detergent - 1, with water and ash/ mud/ sand etc. - 2, with water only - 3; no - 4)</i>	

[6] housing characteristics and micro environment of the households living in houses (i.e., with codes 1, 2, 3, 4, 5 or 9 in item 10 of block 4)					
sl. no.	item			code / entry	
(1)	(2)			(3)	
A. housing characteristics					
1.	plinth level of the house (<i>in feet and in whole numbers</i>) (<i>record '0', if there is no plinth</i>)				
2.	number of floor (s) in the house				
3.	use of house (<i>residential only - 1, residential-cum-commercial - 2, residential-cum-others - 9</i>)				
4.	for 1 or 2 in item 10 of block 4 , period since built (<i>less than 1 year - 01, 1 to 2 years - 02, 2 to 3 years - 03, 3 to 4 years - 04, 4 to 5 years - 05, 5 to 10 years - 06, 10 to 20 years - 07, 20 to 40 years - 08, 40 to 60 years - 10, 60 years or more - 11, not known - 12</i>)				
5.	for 01 to 05 in item 4	year of start	Y	Y	Y
6.		year of completion			
7.	condition of structure (<i>good - 1, satisfactory - 2, bad - 3</i>)				
8.	whether the household has electricity for domestic use? (<i>yes - 1, no - 2</i>)				
9.	for 1 in item 8 , type of electric wiring (<i>conduit wiring - 1, fixed to the walls - 2, temporary - 3</i>)				
10.	drainage system of the household (<i>underground - 1, covered pucca - 2, open pucca - 3, open katcha - 4, no drainage - 5</i>)				
B. micro environment					
11.	system of disposal of household waste water (<i>safe re-use after treatment - 1, disposed off without treatment to: drainage system - 2, open low land areas/streets - 3, ponds - 4, nearby river/ nalla - 5; disposed off with or without treatment to other places - 9, not known - 6</i>)

10.	total number of married couples in the household		
11.	for entry > 0 in item 10 , number of married couples having separate room		
12.	kitchen type (<i>separate kitchen: with water tap - 1, without water tap - 2; no separate kitchen - 3</i>)		
13.	type of fuel used by household for cooking (<i>firewood, chips & crop residue - 01, LPG - 02, other natural gas - 03, dung cake - 04, kerosene - 05, coke / coal - 06, gobar gas - 07, other biogas - 08, charcoal - 09, electricity (incl. generated by solar or wind power generators) - 10, solar cooker - 11, others - 19, no cooking arrangement - 12</i>)		
14.	floor type (<i>mud - 1, bamboo / log - 2, wood / plank - 3, brick / stone / lime stone - 4, cement - 5, mosaic / tiles - 6, others - 9</i>)		
15.	wall type (<i>grass/ straw/ leaves/ reeds/ bamboo, etc. - 1, mud (with / without bamboo) / unburnt brick - 2, canvas / cloth - 3, other katcha - 4, timber - 5, burnt brick / stone / lime stone - 6, iron or other metal sheet - 7, cement / RBC / RCC - 8, other pucca - 9</i>)		
16.	roof type (<i>grass/ straw/ leaves/ reeds/ bamboo etc. - 1, mud / unburnt brick - 2, canvas / cloth - 3, other katcha - 4, tiles / slate - 5, burnt brick / stone / lime stone - 6, iron / zinc / other metal sheet / asbestos sheet - 7, cement / RBC / RCC - 8, other pucca - 9</i>)		
17.	if hired (i.e., for 3, 4 or 5 in item 10 of block 4)	monthly rent (Rs.) (<i>payable approach</i>)	

[8] some general particulars of the households living in houses (i.e., with codes 1, 2, 3, 4, 5 or 9 in item 10 of block 4) in respect of their stay in present area

srl. no.	item	code / entry
(1)	(2)	(3)

A. for all households

1.	duration of stay of the household in the present area* (less than 1 year - 01, 1 to 2 years - 02, 2 to 5 years - 03, 5 to 10 years - 04, 10 to 20 years - 05, 20 to 40 years - 06, 40 to 60 years - 07, 60 years or more - 08, not known - 10)		
2.	where the household was residing before coming to the present area? (in slum/squatter settlement of the same town - 1, in other areas of the same town - 2, in slum/squatter settlement of other town - 3, in other areas of other town - 4, village - 5)		
3.	for 01 in item 1	type of structure of the accommodation availed of immediately before coming to the present area (pucca - 1, semi-pucca - 2, katcha - 3, no dwelling - 4)	
4.		reason for movement to the present area (free / low rent - 1, independent accommodation - 2, accommodation in better locality - 3, employment related reasons: proximity to place of work - 4, other employment related reasons - 5; others - 9)	
5.	number of members who moved into the household during the last 365 days		
6.	number of members who moved out of the household during the last 365 days		

**B. for households living in slums/squatter settlements (for urban only)
(dwellings of area type code 1, 2 or 3 in item 11, block 4)**

7.	does the head of the household possess any of the documents pertaining to the residence status in the present slum/squatter settlement? (possesses: ration card - 1, voter ID card - 2, passport - 3, any combination of codes 1 to 3 - 4, other - 9; none - 5)		
8.	whether the household received any benefit as a dweller of present slum/squatter settlement? (received allotment of land / tenement - 1, received other benefits - 9; received no benefit - 2)		
9.	whether the household tried to move out of the present slum/squatter settlement? (yes - 1, no - 2)		
10.	if 1 in item 9 , main reason (better accommodation - 1, proximity to place of work - 2, social / religious factors - 3, others - 9)		

*: The present area is the area in which the household is being enumerated and is identified by the area types **as recorded in item 11 of block 4**. Therefore, present area means **present village** for rural households and for urban households, present area means **present notified slum or non-notified slum or squatter settlement or 'other areas' of the town**.
